DYNAMIC, THE REFERENCED LEADER FOR PPE IN CANADA, IS NOW A PROUD PART OF THE PIP GLOBAL FAMILY

Protective Industrial Products, Inc. (PIP) was initially established in 1984 as a supplier of work gloves. Today we are a global provider of a vast array of consumable personal protective equipment to multiple industries and channels of distribution.

Our Dynamic branded safety equipment are proudly made to meet all the safety regulations and/or standards required in Canada, the United States, Europe and Latin America. These products must be certified by multiple certification bodies such as CSA, ANSI, CE, NIOSH and when permitted, we are proud to display these logos on our products. This ensures that you can place your trust in products that meet the highest possible standards of quality.

PRODUCTS & PROGRAMS THAT SUPPORT YOUR BUSINESS OBJECTIVES

Our manufacturing facilities in Canada are committed to bringing to market products that provide the best possible comfort, fit, and value. But bringing you the best doesn't stop there. Our dedicated team of product managers and specialists have over 100 years of collective experience, ensuring that you receive expert support and enabling you to conduct trainings and risk assessment in the workplace, in addition to helping your safety committee select the proper PPE. Furthermore, we are continuously developing our website that is second to none, thanks to powerful yet intuitive tools such as our product selector and 3SP™ assessment.

At PIP Canada we strive to design and produce the best PPE in the market, and make sure that all employees arrive home safe and sound everyday.

BRINGING THE
BEST OF THE WORLD
TO YOU®

CSA Traffic Vests

REGULAR DESIGN

Customized Traffic Wear

Use your traffic vest to promote your image and your health & safety message:

- ▶ All traffic vests and shirts can be personalized with your logo or message
- ▶ Personalization can be done with heat transfer procedure
- ▶ Your message can be put on the retro-reflective material or on the bright background material
- ▶ Multiple color printing available (depending on placement)
- ▶ Personalization should meet the requirements of the standard

CSA Z96-15: High-Visibility Safety Apparel

CSA Z96-15 is a standard that specifies the minimum requirements for apparel used for high-visibility purposes in the work environment. The clothing must be able to signal the presence of the user visually. It is also intended to provide conspicuity in hazardous situations specially in low-light conditions. The performance requirements of the garment include the color of the clothing, its retro-reflectivity, the minimum area it covers on the body, and its configuration.

CSA Z96-15 puts high-visibility safety apparel into three classes that are specified according to the body coverage that is provided.

- ▶ **Class 1:** is a basic harness with stripes of retroreflective material (or combination of retroreflective stripes with background material) coming over the shoulders forming two parallel lines in the front and a symmetric X shape in the back and encircling the waist (360°).
- ▶ **Class 2:** has a background material that covers the full upper torso (front, back, sides and over the shoulders). It must have retroreflective stripes coming over the shoulders forming two parallel lines in the front and a symmetric X shape in the back and encircling the waist (360°).
- ▶ **Class 3:** is a Class 2 apparel with the addition of retroreflective stripes encircling both arms and both legs (at/or below the knees).

In addition to specifying the performance for both background material and retroreflective stripes, **CSA Z96-15** confirms that:

- ▶ Background material must be made of bright or fluorescent colors (yellow/green, orange/red or red).
- ▶ Retroreflective stripes must:
 - Be 5 cm wide minimum
 - Have a contrasting color to that of the background material
 - Be placed at least 5 cm from the edge or from another stripe

CSA Z96-15 allows the addition of optional patches and lettering for identification or personalization purposes:

- ▶ If non-retroreflective patches or lettering are used, they must not cover more than 105 cm².
 - A maximum of 25 cm² on the front of the garment
 - Must not cover the retroreflective stripes on the back
- ▶ If retroreflective patches or lettering are used, they must not cover more than 500 cm².
 - Additionally, they must not affect the recognizable pattern of the garment's retroreflective stripes
