PROTECTIVE INDUSTRIAL PRODUCTS

WELCOME TO THE NEW PIP® SAFETY PRODUCTS CATALOG

We are beyond excited to share the entirety of our products and the value they deliver in one convenient reference piece.

Recent global events are requiring many of us to adapt – making a digital, touchless experience the preferred method for literature for the foreseeable future. We also know that tablets and smartphones are now the go-to means for accessing up-to-date information. Still, we recognize that there is value in having - at the very least - an offline copy of the catalog on a job site or factory floor where internet access or device access may be limited.

Our new complete catalog has been developed with this in mind, by optimizing the layout for both a digital and physical presentation, while still being able to provide an engaging experience with a "flip-through" effect when viewed on a screen.

There are two simple ways to view our new catalog:

1. **Digital Flipbook Link:** Click on this link to view as a digital flipbook then select "add to your home screen" to create a shortcut on your tablet or smartphone for easy future reference. The flipbook version is a live link and will be updated automatically.
2. **Download PDF:** Visit the literature section of www.pipcanada.ca to download a PDF. Please note that we will be making regular updates as our product offering continues to evolve.

Our catalog features products from the newest members of the PIP Global family including **G-Tek®, Boss®, Dynamic®, Caiman®, QRP®** and more. Other noteworthy features include:

- **Portrait Format** for ease of handling physical copies and enhanced online viewing for tablets and mobile devices
- **Safety Product Solutions** conveniently identified by category
- **Product Images** within each section are sorted by Type, Application and/or Performance Specification
- **Product Tables** list by style number, allowing for the easy comparison of product attributes, quick selection or cross-referencing
- Searching is now all digitized on the flipbook version:
  - **Table of Contents** have live links that take you right to the section you're looking for
  - The **Search Icon** allows you to instantly access any product by item number or keyword
- **High-Impact Intro Pages** divide sections and provide key facts about products, compliance and industry performance standards

PIP CANADA ADMINISTRATION LOCATIONS

Global Provider
of Innovative Safe

PROTECTIVE INDUSTRIAL PRODUCTS

Each day, we seek to develop, train and provide our customers with innovative safety products that help keep workers safer, more comfortable and more productive.

We work with our distributor partners to deliver best-in-class customer experiences by providing a comprehensive product offering, world-class sales tools and efficient processes.

Our close-to-home manufacturing facilities enable us to provide safety solutions that are tailored to customer needs. These factories work with our team of product managers, specialists and field quality control technicians to ensure the highest level of product performance and secure proprietary technologies that support us being first-to-market.

Hand and Arm
PROTECTION

PIP® is committed to developing and providing hand and arm protection products that deliver maximum performance in the harshest conditions and in the widest array of applications.

CUT HAZARDS

IMPACT HAZARDS

MECHANICAL HAZARDS

INSULATED/COLD HAZARDS

14 **COATED SEAMLESS KNIT CUT RESISTANT GLOVES** are specifically designed to improve grip performance and protection against risks while handling sharp objects such as blades, glass or metals. ANSI/ISEA 105:2016 and EN 388:2016 standards provide guidance to compare the performance characteristics of each style of glove.

23 **UNCOATED SEAMLESS KNIT CUT RESISTANT GLOVES** do not have any coating material. Gloves made from aramid blended yarns provide cut resistance and heat defense. HPPE blended yarns provide cut resistance, cool comfort and sanitized launderability for critical food handling applications.

27 **COATED SEAMLESS KNIT GENERAL PURPOSE GLOVES** are designed to provide hand coverage and grip. Liner materials are typically acrylic, cotton, polyester or nylon blends that are comfortable but offer no measurable cut resistant properties.

39 **GENERAL PURPOSE FABRIC WORK GLOVES** are offered in a wide variety of materials, grades and styles. Cotton and canvas gloves are constructed of woven fabric cloth and come in a variety of weights and styles, to provide soft, flexible comfort and good overall wear. Chore and jersey gloves are lightweight gloves used to keep hands clean and protect against scrapes and abrasions in low-risk work applications.

43 **LEATHER DRIVERS AND LEATHER PALM GLOVES** are versatile, economical and durable providing comfort and protection against abrasion. Leather comes in a variety of styles, designs and grades, each offering unique characteristics for different jobs. Leather gloves provide no measurable cut resistance properties unless lined with a cut resistant liner.

49 **HIGH PERFORMANCE TASK-SPECIFIC GLOVES** use advanced, composite materials and are purpose built to deliver a higher level of performance in specialized conditions. They include impact-resistant, AR/FR, mechanics and task-specific styles.

53 **PROTECTIVE SLEEVES** help keep arms and wrists safe from cuts and abrasion in a variety of applications. Depending on the specific needs required, sleeves can be designed at various lengths and with different materials that can offer high cut resistance as well as light heat resistance.

CUT PROTECTION MATERIAL BASICS

Technology platforms

ADVANCED CUT RESISTANT FIBER AND YARN TECHNOLOGIES

Protection workers want to wear.

THAT'S OUR GOAL.

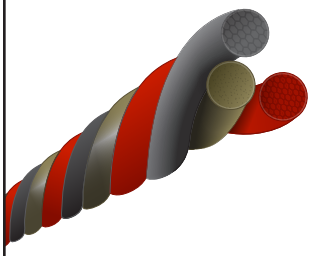

It's about more than just cut protection. It is about cut protection that meets every need. G-Tek® represents the safety industry's most comprehensive line of coated seamless knit gloves.

For over 30 years PIP® has invested in **G-Tek®** products, evolving them from simple cotton knits to the most advanced gloves that combine engineered yarns, advanced ergonomic design and coating elastomers.

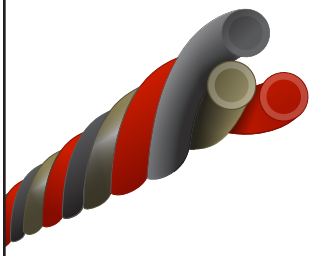

PolyKor®

PROTECTION. PERFORMANCE. VALUE.

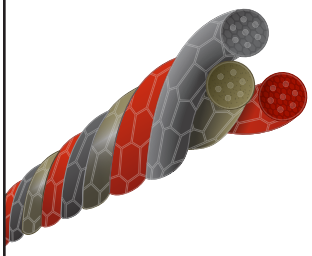

PolyKor® engineered yarns optimize performance, function and protection using proprietary blends of select fibers to exceed industry standards. The ultimate objective is an affordable array of cut resistant gloves for practically every application.

PolyKor® X7™ TECHNOLOGY

HIGH DEXTERITY. MAXIMUM CUT RESISTANCE.

X7™ technology is the latest in engineered yarn development. This super lightweight reinforced yarn provides very high cut resistance and durability by way of proprietary fibers.

PolyKor® XRYSTAL™

STRONGEST. TOUGHEST. HARDEST.

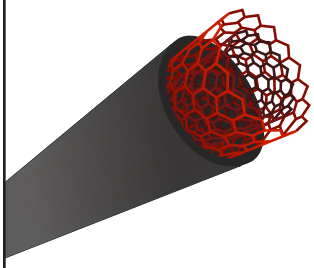

Xrystal™ technology represents the latest in PolyKor® engineered yarns that are combined with naturally hardened crystallized minerals. The result is a super tough, durable, cut resistant fiber that is at the peak of performance.

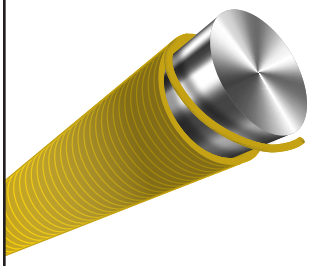

Suprene™

TOUGH. RESISTANT. DURABLE.

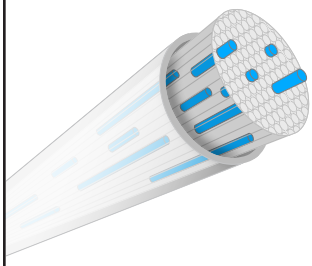

The latest breakthroughs in nanofabrication has resulted in fibers containing graphene material which we call Suprene™. Suprene™ is a high performance yarn that offers unparalleled strength and physical properties that are unique to graphene.

KEV™

CUT AND HEAT RESISTANCE.

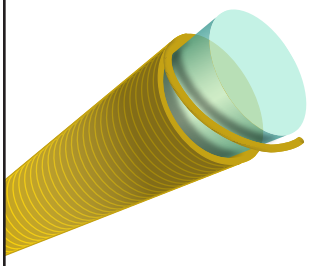

Combines the power of DuPont® Kevlar® with proprietary core technology for exceptional cut strength and protection in light heat applications.

3GX®

UNMATCHED COMFORT. IMPROVED CUT PROTECTION.

Dyneema® Diamond advanced technology of embedded micro-particles strengthen fibers by up to two times, delivering higher cut scores. 3GX® Technology offers cool touch comfort and lightweight durability for improved productivity.

ACP™ TECHNOLOGY

MAXIMUM CUT RESISTANCE. NO SKIN IRRITATION.

ACP™ are proprietary yarn formulations that use encapsulated glass fibers to maximize cut resistance and eliminate skin irritation.

COATING BASICS

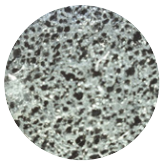

A complete line of coatings

UNMATCHED IN SELECTION AND PERFORMANCE

NEOFOAM®

SECURE HANDLING OF LIGHT TO HEAVY PARTS OR ITEMS

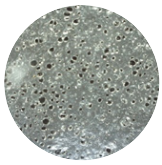

Proprietary coating only available on G-Tek® brand gloves. NeoFoam® is a highly flexible coating that provides wearers with a high degree of grip, hand dexterity and comfort. NeoFoam® is versatile, hardworking, resistant to light oils and touchscreen compatible with most devices, making G-Tek® NeoFoam® coated gloves the optimal choice for numerous handling applications.

MICROSURFACE

Coating surface infused with thousands of tiny suction cup pockets. When pressed into contact with a wet or oily surface, they create a vacuum effect that disperses fluids away – significantly improving grip.

- Good grip in dry, wet, or oily conditions

FOAM

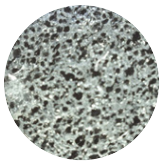

Foam coating cell structure is designed to channel fluids away from the surface of the object generating grip in oily conditions. Oily grip effectiveness varies with density of cells.

- Secure grip in dry conditions
- Fair grip in slightly oily or wet conditions

NITRILE

TOUGH COATING FOR HEAVY-DUTY JOBS

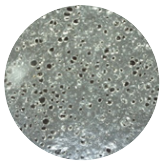

Nitrile is a synthetic rubber compound that offers excellent puncture, tear and abrasion resistance. Nitrile is also known for its resistance to hydrocarbon-based oils or solvents. Nitrile coated gloves are the first choice for industrial jobs which require handling of oily parts. Nitrile is durable and helps to maximize protection.

MICROSURFACE

Coating surface infused with thousands of tiny suction cup pockets. When pressed into contact with a wet or oily surface, they create a vacuum effect that disperses fluids away – significantly improving grip.

- Good grip in dry, wet, or oily conditions

FOAM

Foam coating cell structure is designed to channel fluids away from the surface of the object helping improve grip in oily conditions. Oily grip effectiveness varies with density of cells.

- Secure grip in dry conditions
- Fair grip in slightly oily or wet conditions

FLAT / SMOOTH

Flat/Smooth coatings provide the wearer with a secure dry grip. Liquids will not absorb into the coating, keeping hands dry and clean.

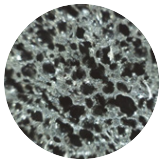

- Secure, tacky grip for dry surfaces

ATG® NITRILE

PREMIUM COATING FOR PREMIUM PERFORMANCE

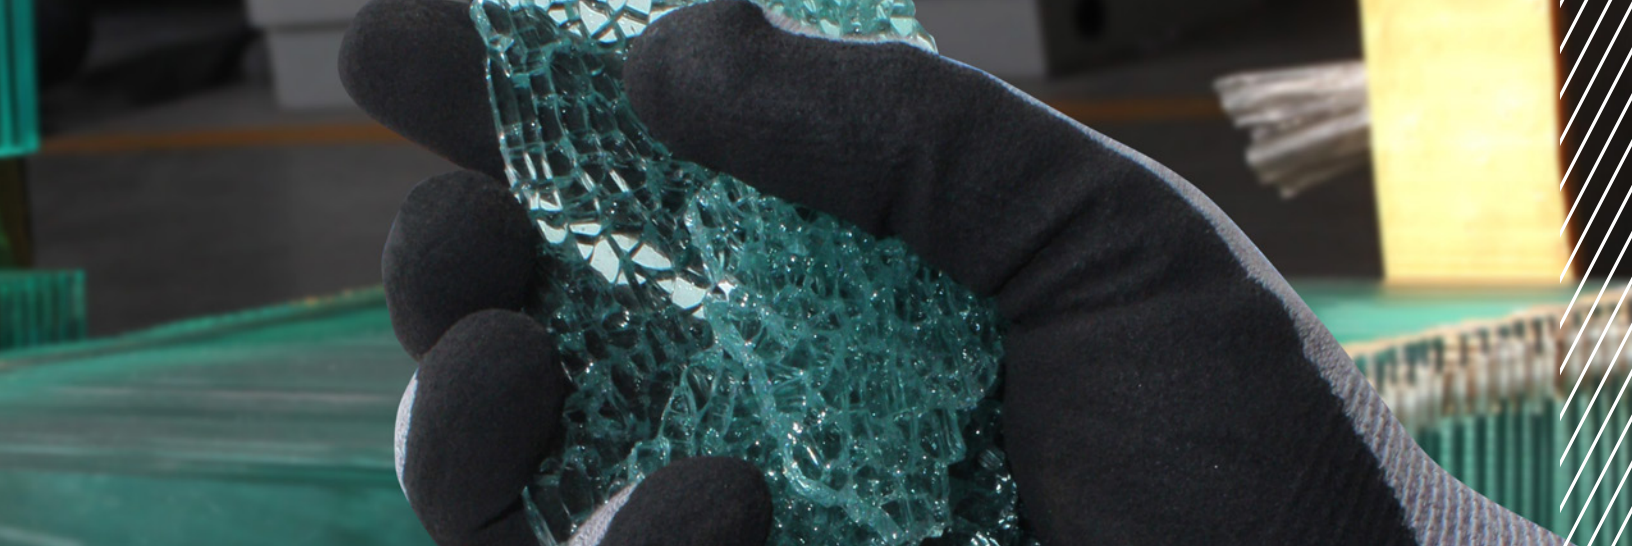

Proprietary ATG® Nitrile Butadiene Rubber formulation is applied precisely and thinly over the glove liner to all MaxiFlex® and MaxiCut® gloves, delivering maximum dexterity and flexibility. The coating is exceptionally durable and long-lasting.

MICROFOAM

MicroFoam is a patented formulation of ATG's nitrile coating that allows gloves to be thinly coated for added grip, dexterity, comfort and breathability.

- Controlled grip in dry and in slightly oily conditions
- Premium comfort & flexibility

LATEX

TOUGH JOBS — DRY OR OILY-WET

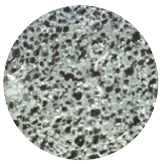

Latex is a natural rubber that is flexible, tough and durable, delivering a high degree of resistance to snagging, puncture and abrasion. Latex is water-resistant as well as resistant to protein-based oils. Latex is not recommended for jobs that involve contact with hydrocarbon-based oils or solvents.

CRINKLE

Crinkle coatings have creases or wrinkles on the surface of the coating that are designed to channel fluids away and allow better contact on dry or wet surfaces.

› Secure grip in dry or wet conditions

MICROSURFACE

Coating surface infused with thousands of tiny suction cup pockets. When pressed into contact with a wet or slippery surface, they create a vacuum effect that disperses fluids away – significantly improving grip.

› Good grip in dry and wet or oily-wet surfaces

POLYURETHANE

IDEAL FOR PRECISION HANDLING AND LIGHT TO MEDIUM DUTY JOBS

Polyurethane (PU) is a tough, proven material that offers good tactile sensitivity by way of its thin material deposit. It conforms closely over multiple glove liners to provide flexibility, dexterity and tactile sensitivity. PU coated gloves are amongst the most commonly used because they are versatile and provide excellent value. Newer, water-based PU coatings offer improved flexibility and less environmental lifecycle impact.

FLAT / TEXTURED

Flat/Textured PU takes on the surface properties of the glove liner which results in the thin, conformable deposit of coating material. The flat, textured nature of this coating is unique to Polyurethane (PU) coated gloves.

› Tactile grip in dry and in slightly oily conditions

RESISTIVE TOUCHSCREENS, found on most industrial controls, rely on pressure and are unaffected by the use of gloves. **CAPACITIVE TOUCHSCREENS,** typically used with tablets, smartphones and laptops rely on the electrical field effect from our finger. PIP® trials have found that many of our coated seamless knit gloves with thinner black coatings will work with today's latest mobile devices. However, we recommend trials prior to equipping teams with gloves.

HAND PROTECTION

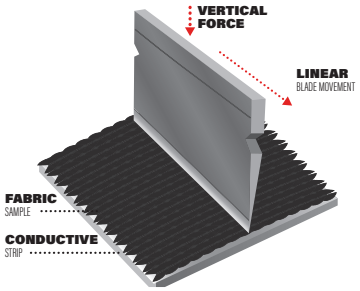

Understanding cut and impact protection

PIP® GLOVES ARE TESTED TO ANSI AND EN STANDARDS

Both standards test gloves for abrasion, cut, tear and puncture. U.S. safety managers know to choose products that are tested and labeled in order to ensure the best possible protection for the job being performed.

ANSI-105 AMERICAN NATIONAL STANDARD

This standard has established ASTM F2992-15 as the test method for measuring cut resistance on a 9-level scale with the widely recognized TDM 100 machine that uses a linear sliding blade.

ANSI A1	ANSI A2	ANSI A3	ANSI A4	ANSI A5
200 - 499	500 - 999	1000 - 1499	1500 - 2199	2200 - 2999

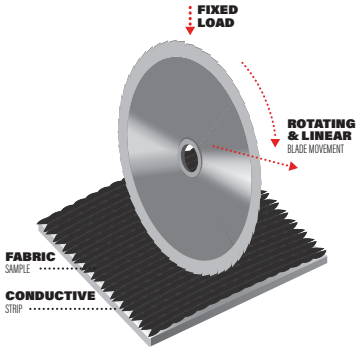

GRAMS

ANSI A6	ANSI A7	ANSI A8	ANSI A9
3000 - 3900	4000 - 4900	5000 - 5900	> 6000

GRAMS

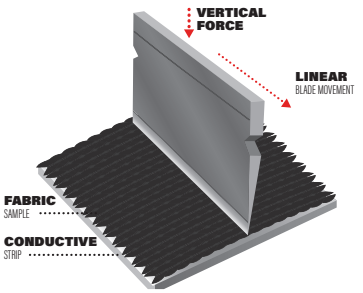

EN 388 EUROPEAN CUT STANDARD (CE)

This standard allows for two different testing standards and methods: The Coup Test using a rotating circular blade and the TDM Test using a linear sliding blade using the ISO 13977 method.

EN 1	EN 2	EN 3	EN 4	EN 5
1.2 - 2.4	2.5 - 4.9	5.0 - 9.9	10.0 - 19.9	> 20

AVERAGE CUT INDEX (10 MEASUREMENTS)

EN A	EN B	EN C	EN D	EN E	EN F
2 - 4.9	5 - 9.9	10 - 14.9	15 - 21.9	22 - 29.9	30+

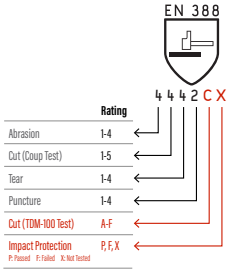

RANGE (NEWTONS)

ANSI-105-2016
STANDARD

EN388
2016 STANDARD

ANSI-138-2019
STANDARD

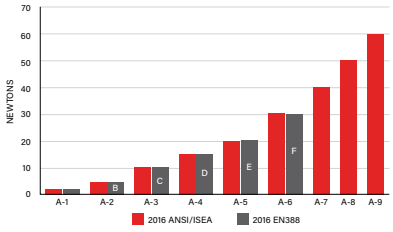

EN 388 PERFORMANCE MARKINGS

The EN 388 performance score appears in markings as such. Each number is representative of a specific performance characteristic. The 2016 revision included two more positions. The fifth position indicates the TDM test score and the sixth position indicates the impact resistance test score.

COMPARING TDM TEST ANSI 105 TO EN 388

Below is a graph that illustrates how the new EN TDM-100 test aligns closely with the ANSI cut test. The table below the graph outlines the full details of the scores and when converting Newtons to grams.

CONVERTING NEWTONS TO GRAMS

EN 388 RATING	RANGE (NEWTONS)	CONVERTED RANGE (GRAMS)	ANSI/ISEA 105 LEVEL	RANGE (GRAMS)
A	2 - 4.9	204 - 508	A1	200 - 499
B	5 - 9.9	509 - 1,019	A2	500 - 999
C	10 - 14.9	1,020 - 1,529	A3	1,000 - 1,499
D	15 - 21.9	1,530 - 2,242	A4	1,500 - 2,199

---	---	---	A8	5,000 - 5,999
---	---	---	A9	6,000+

IMPACT RESISTANT GLOVE STANDARD (2019 EDITION)
ANSI/ISEA 138 - 2019

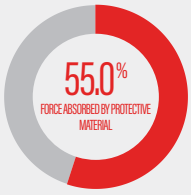

The ANSI/ISEA 138 2019 Impact Resistant Glove Standard was developed to better classify the impact resistance of gloves, making it easier than ever to choose the right impact glove for any application. This standard considers the minimum performance, classification and labeling requirements for material protecting the fingers and knuckles from impact.

UNDERSTANDING ANSI/ISEA 138-2019 TESTING

ANSI/ISEA 138-2019 outlines three levels of impact protection. Each level is determined by how effectively each glove can disperse impactful force applied during testing. The way this impactful force is created is by dropping a 2.5-kilogram mass onto each glove with an impact energy of 5 joules. This process is repeated ten times on the fingers and eight times on the knuckles. The glove's impact level will then be determined based on the Mean Transmitted Force (MTF) recorded.

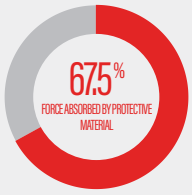

It is important to note that the MTF of the finger region is treated separately from that of the knuckle region, so the lower mean transmitted force of the two regions will be used to classify the glove as a whole.

ANSI/ISEA 138 **1**

LOW
PERFORMANCE LEVEL

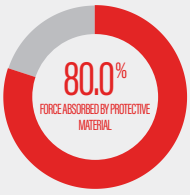

≤ 9.0 (kN)
MTF

ANSI/ISEA 138 **2**

MEDIUM
PERFORMANCE LEVEL

≤ 6.5 (kN)
MTF

ANSI/ISEA 138 **3**

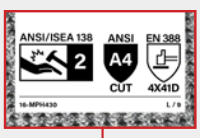

HIGH
PERFORMANCE LEVEL

≤ 4.0 (kN)
MTF

GLOVE MARKINGS AND NEW ICONS

PIP® Impact resistant gloves now display the ANSI/ISEA 138-2019 symbol in accordance to its level. The symbol is printed next to the ANSI cut score on a tag located inside of the wrist of the glove.

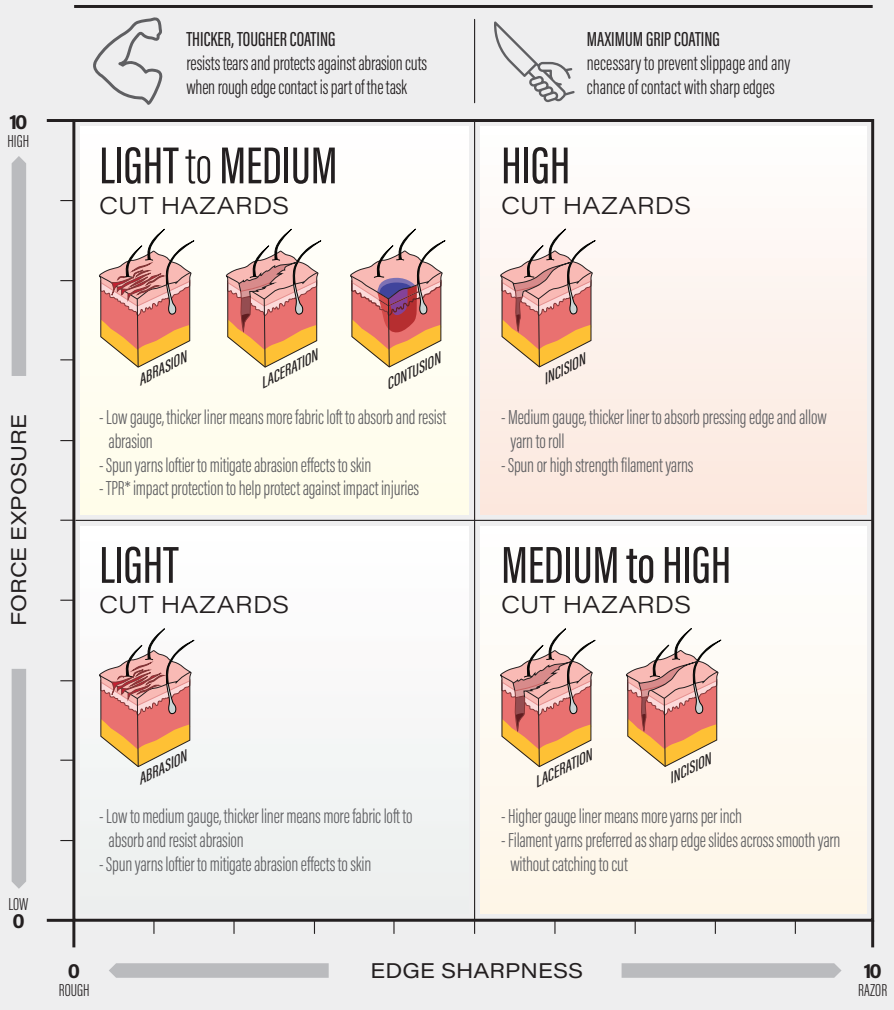

TAG INSIDE OF GLOVE

PROTECTIVE INDUSTRIAL PRODUCTS

Cut Risk Hazard Matrix™

CHOOSING THE RIGHT HAND PROTECTION

YOUR GUIDE TO THE RIGHT CHOICE

Copyright © 2017. Protective Industrial Products, Inc. All rights reserved.

Cut Risk Hazard Matrix™

The Cut Risk Hazard Matrix™ is a unique and logical method to guide users in selecting a glove or sleeve with the right cut resistant material and score. Once a safety manager can identify where their application fits on the Cut Risk Hazard Matrix™, they can more confidently correlate the task to the glove or sleeve best suited for their job.

CRH MATRIX©

We deemed it necessary to develop a unique approach to help determine the risk and possible severity of an injury.

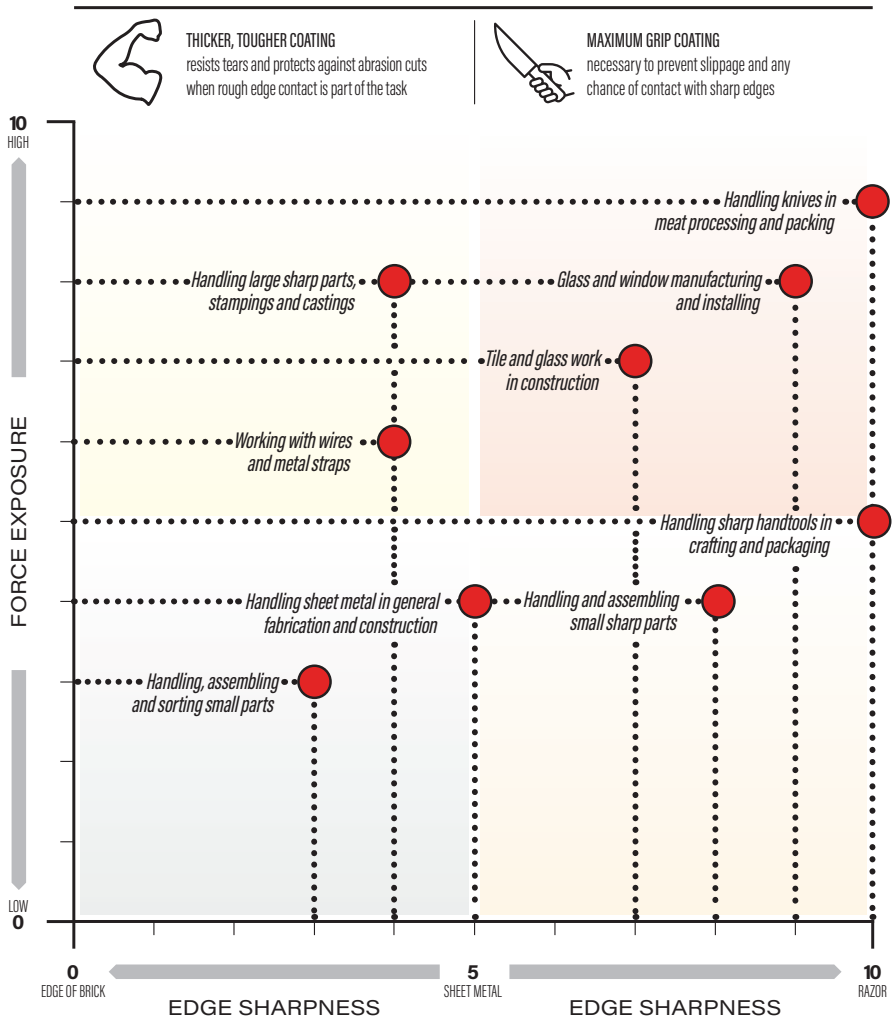

CALCULATING THE CRH: FACTOR™

1. Assess the EDGE SHARPNESS with "Rough" equating to the edge of a brick and "Razor" to that of a sharp knife.
2. FORCE is relative to the different tasks being performed. Tasks such as deboning large animals require a high degree of force compared to working with box cutters in a repacking operation.
3. Mapping the two will place you in one of the four quadrants of RISK where you can determine your CRH: Factor™ and proceed to selecting the optimal coating for maximum grip.

WE'VE EQUATED CUT SCORE FACTORS WITH REAL-WORLD TASKS AND APPLICATIONS AS EXAMPLES

By plotting the tasks and applications, we determine a **Cut Risk Hazard Factor**™ (CRH: Factor™) as outlined on the right side.
The CRH: Factor™ is a comparative indicator that helps safety managers determine the level of potential hazard related to the task or application.

CRH: FACTOR™	TASK
9:10	HANDLING KNIVES IN MEAT PROCESSING AND PACKING
8:9	GLASS AND WINDOW MANUFACTURING AND INSTALLING
7:7	TILE AND GLASS WORK IN CONSTRUCTION
8:4	HANDLING LARGE SHARP PARTS, STAMPINGS AND CASTINGS
6:4	WORKING WITH WIRES AND METAL STRAPS
5:10	HANDLING SHARP HANDTOOLS IN CRAFTING AND PACKING
4:8	HANDLING AND ASSEMBLING SMALL SHARP PARTS
4:5	HANDLING SHEET METAL IN GENERAL FABRICATION AND CONSTRUCTION
3:3	HANDLING, ASSEMBLING AND SORTING SMALL PARTS

COATED SEAMLESS KNIT CUT RESISTANT GLOVES

Quick Find Index

ENHANCED PERFORMANCE FEATURES

TOUCHSCREEN

With the rapid increase of technology in the workplace, especially in factories and manufacturing plants where cut-resistant work gloves are used, touchscreen compatibility has never been more important. Use this index to locate gloves that combine cut resistance and touchscreen compatibility for increased safety and efficiency.

SILICONE FREE

Silicone is an excellent lubricant and release agent frequently found in manufacturing. These same properties are a major concern in coating or bonding applications, such as automotive finishing. The slightest trace of silicone can result in adhesive failure, resulting in poor quality finishes that cost time and drain resources to repair. Use this index to locate gloves required for silicone-free applications.

21 CFR

Cross-contamination of one item or surface onto another can cause serious illnesses or allergic reactions. Coated seamless knit gloves are ideal for indirect contact in food plants for MRO applications or sorting and packaging tasks where the contact is incidental, or when the contact is not purposeful or continuous. Use this index to locate gloves that are ideal for indirect food contact applications.

Uncoated Knit Cut Resistant Gloves

MADE IN THE USA

CLAW COVER®

THE #1 TRUSTED BRAND FOR HIGH-RISK FOOD PROCESSING WORKERS

Made in the USA, Claw Cover® seamless knit gloves are designed to provide high-level cut protection while complying with both U.S. and Canadian standards for food contact. Claw Cover® gloves are launderable and can be used for operations where direct, indirect and incidental contact with food may occur.

KUT GARD®

MADE IN AMERICA UNCOATED GLOVES FOR INDUSTRIAL WORKERS

Kut Gard® is the Made in America brand for factories and operations demanding the highest level of cut resistant gloves, sleeves and garments. Proprietary engineered yarns and the ability to configure custom solutions make Kut Gard® the brand of choice for safety managers.

YARN TECHNOLOGIES

DYNEEMA®
Dyneema® is 15 times stronger than steel on a weight-for-weight basis! It's a high performance polyethylene (HPPE) fiber made from ultra high molecular weight polyethylene (UHMWPE). Dyneema® fiber is much thinner and more flexible than traditional materials, such as leather and cotton, while offering higher protection.

PolyKor®
Products constructed with PolyKor® engineered yarn are suitable to protect against mechanical hazards in the toughest environments. PolyKor® products are designed for different protection levels, up to the highest levels, while maintaining an unprecedented level of comfort.

CUTTING | CHOPPING | TRIMMING | FILLETING | CUTS AND SNAGS

FIBER TECHNOLOGIES

KEVLAR®
Kevlar® is light, comfortable and provides enduring protection against heat, cuts, lacerations and abrasions. Protective gloves and sleeves bearing this brand name provide assurance of compliance with strict performance and quality standards and are produced only by Kevlar® licensed manufacturers.

ACP™ AND ATA®
Proprietary ACP™ and ATA® technologies raise the standards for performance knit products, offering an increase in overall performance and value compared to traditional Aramid products. ACP™ and ATA® provide excellent abrasion and cut resistance for a lower cost per use. Gloves and sleeves featuring ACP™ and ATA® technology are 100% silicone-free.

GLASS HANDLING | METAL HANDLING | SHARP PARTS ASSEMBLY | HEAT RESISTANCE | CUTS AND SNAGS

Antimicrobial treatment used on glove fibers/yarns help to inhibit bacteria, mold and mildew from developing in the presence of sweat and moisture, thereby improving comfort and extending the life of the sleeve.

Products referenced as "Compliant with FDA 21 CFR 177.2800" refer specifically to PART 177 — INDIRECT FOOD ADDITIVES: POLYMERS Sec. 177.2800 Textiles and textile fibers. Textiles and textile fibers may safely be used as articles or components of articles intended for use in producing, manufacturing, packing, processing, preparing, treating, packaging, transporting, or holding food.

SECTION:

General Purpose Gloves

G-Tek® CONFIDENCE TO DO THE JOB™

This section contains general purpose gloves designed to keep hands clean and protect the wearer's hands from scrapes and abrasion in low-risk work applications. PIP® offers a full range of economical general purpose gloves that combine comfort, protection and fit to suit any type of application.

General Purpose Coated Gloves are offered in a variety of materials that provide unique grip characteristics (see page 8 for more information on glove coatings). They offer a high degree of hand dexterity, tactile sensitivity, durability and abrasion resistance when compared to uncoated gloves.

General Purpose Uncoated Gloves are an economical solution to keeping hands protected in low-risk work applications. Commonly constructed of cotton, polyester and nylon yarns either in their pure form or in a blended form. With a reversible design, they can be replaced one at a time, instead of in pairs. They also function as added insulation as a glove liner for other styles of hand protection.

General Purpose Fabric Gloves are offered in a wide variety of materials, grades and styles. Cotton, cotton canvas and poly/cotton blended gloves are constructed of woven fabric cloth offered in a variety of weights and styles to provide soft, flexible comfort and good overall wear and durability. These glove materials meet two important requirements. First, the tightly woven fabric forms a barrier against dirt and grime. Secondly, the weave provides a strong surface to resist abrasion. Additionally, cotton is known to be one of the easiest fibers to wash; because of its excellent thermal properties it keeps its natural size after repeated drying.

Chore and Jersey Gloves are lightweight gloves used to keep hands clean and protect against scrapes and abrasions in low-risk work applications. Constructed of 100% cotton or cotton/polyester blends, these are the original cut and sewn type of hand protection, Clute cut with a straight thumb. New types include cotton canvas, double palm and dotted palm. They are used in general warehouse and shipping tasks, landscaping, light assembly, general maintenance and light automotive applications.

Leather General Purpose Gloves are economical, extremely durable, naturally heat resistant and provide outstanding flexibility and comfort. Leather comes in a variety of types and grades, each with unique characteristics that influence the glove's durability, puncture resistance, abrasion resistance, flexibility, insulation properties, moisture-resistance and breathability. Leather general purpose gloves are often used in construction, carpentry, general maintenance, agriculture and landscaping.

COATED SEAMLESS KNIT GENERAL PURPOSE GLOVES

Quick Find Index

ENHANCED PERFORMANCE FEATURES

TOUCHSCREEN

With the rapid increase of technology in the workplace, especially in factories and manufacturing plants where cut-resistant work gloves are used, touchscreen compatibility has never been more important. Use this index to locate gloves that combine cut resistance and touchscreen compatibility for increased safety and efficiency.

SILICONE FREE

Silicone is an excellent lubricant and release agent frequently found in manufacturing. These same properties are a major concern in coating or bonding applications, such as automotive finishing. The slightest trace of silicone can result in adhesive failure, resulting in poor quality finishes that cost time and drain resources to repair. Use this index to locate gloves required for silicone-free applications.

21 CFR

Cross-contamination of one item or surface onto another can cause serious illnesses or allergic reactions. Coated seamless knit gloves are ideal for indirect contact in food plants for MRO applications or sorting and packaging tasks where the contact is incidental, or when the contact is not purposeful or continuous. Use this index to locate gloves that are ideal for indirect food contact applications.

SECTION:

High Performance Gloves

BOSS MADE FOR WORKING™

MAXIMUM SAFETY TOUGHEST MATERIALS. TOUGHEST STANDARDS. TOUGHEST PROTECTION.™

This section contains high performance task-specific gloves. These are field-tested gloves, designed for real-world environments using advanced, composite materials and built to deliver a higher level of performance in the harshest conditions. Key markets include Oil & Gas, Mining, Construction, Electrical and Gas Utilities and Mechanical Trades.

EVERY INDUSTRY HAS SPECIFIC NEEDS

High Performance gloves are generally considered to be gloves that are designed and built for the toughest of jobs. Key applications include Oil & Gas, Heavy Industry, Mining, Trench Work and Construction. These gloves are typically composed of multiple materials that may include natural leathers and/or tough synthetics that are highly cut, tear and puncture-resistant. Key to the enhanced protective nature of these gloves is the back-of-hand impact protection where thermoplastic rubber (TPR) or similar elastomers are carefully applied to maximize coverage, protection and flexibility. The recently released ANSI 138 standard for back-of-hand impact protection provides a testing and scoring method for impact protection. It allows for a score of 1 to 3, low to high, based on the mean transmitted force across several specific points across the back of the hand, knuckles and fingers.

Task-specific and **Mechanics gloves** are gloves that are designed for specific jobs. Our product developers take the time to understand every aspect of a job to learn the pain points, the high-risk points and the high wear points. Then they find the right glove design that mitigates all of these while providing the wearer with comfort and dexterity to do the job.

ARC Rated (AR) gloves help provide flame and thermal protection from exposure to an electrical ARC flash. Gloves are a vital component of PPE worn to protect workers while working around energized equipment. AR rated gloves are designed and treated to help limit exposure and burn percentage as a result of an electrical ARC flash incident. The National Fire Protection Association (NFPA) outlines four ARC Flash PPE Categories to classify ranges of ARC flash hazards and the corresponding requirements for Personal Protective Equipment (PPE).

Flame resistant (FR) gloves earn their designation because they are made of fabrics that are inherently resistant to or are treated to be resistant to igniting when exposed directly to flame. The material resists ignition or is designed to self-extinguish when ignited. FR gloves can also be designed with an extra liner that provides a thermal barrier to help protect the wearer's skin when exposed to direct heat energy and help minimize the risk.

Arm Protection

MADE IN THE USA

KUT GARD®

MADE IN AMERICA ARM PROTECTION SOLUTIONS FOR INDUSTRIAL WORKERS

Kut Gard® is the Made in America brand for factories and operations demanding the highest level of cut resistant sleeves. Proprietary engineered yarns and the ability to configure custom solutions make Kut Gard® the brand of choice for safety managers.

CLAW COVER®

THE #1 TRUSTED BRAND FOR HIGH-RISK FOOD INDUSTRY WORKERS

Made in the USA, Claw Cover® sleeves are designed to provide high-level cut protection while complying with both U.S. and Canadian standards for food contact. Claw Cover® sleeves are launderable and can be used for operations where direct, indirect, and incidental contact with food may occur.

YARN & FIBER TECHNOLOGIES

ACP™ & ATA® proprietary blends use encapsulated glass fibers to create a strong, cut resistant option with no skin irritation.

Dyneema® is made from ultra-high molecular weight HPPE, offering superior strength and high cut resistance. Dyneema® and the stronger **Dyneema® Diamond fiber technology** is soft and comfortable and dissipates heat for a cool-wearing effect. Dyneema® fibers are not designed for use near heat or in flame-resistant applications.

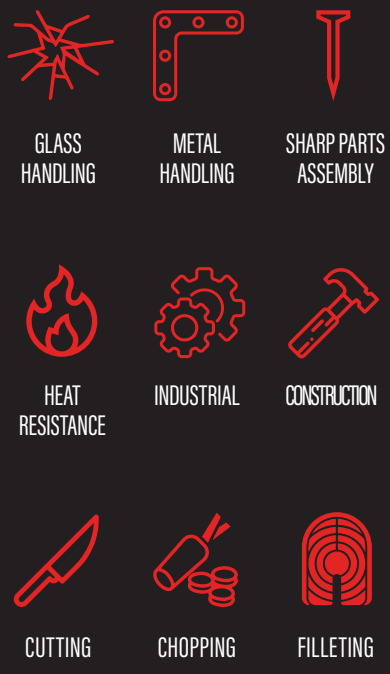

Kevlar® (Para-Aramid) is inherently flame resistant and known for its high strength and excellent cut resistance. Kevlar® is blended with different materials like ACP™ or cotton to enhance its performance.

PolyKor® Xrystal™ is a proprietary PIP® yarn blended with Para-Aramid and HPPE to greatly enhance cut protection without the use of glass or steel.

PolyKor® combines PIP's proprietary fibers and engineered yarns to produce affordable cut resistant sleeves designed to surpass performance characteristics to optimize comfort and function for every application.

Pritex® is a proprietary synthetic blend with inherent antimicrobial properties. Offered in general purpose styles for protection against minor scrapes and contamination or blended with cut resistant fibers like Dyneema®/ACP™ or Kevlar®/ACP™ as an economical alternative to higher-priced blends.

Cotton is a natural fiber that provides sweat absorption and all-day comfort.
Polyester is a more durable alternative to cotton offering added protection from abrasion.

Antimicrobial treatment used on sleeve fiber/yarns help to inhibit bacteria, mold and mildew from developing in the presence of sweat and moisture, thereby improving comfort and extending the life of the sleeve.

Products referenced as "Compliant with FDA 21 CFR 177.2800" refer specifically to PART 177 — INDIRECT FOOD ADDITIVES: POLYMERS Sec. 177.2800 Textiles and textile fibers. Textiles and textile fibers may safely be used as articles or components of articles intended for use in producing, manufacturing, packing, processing, preparing, treating, packaging, transporting, or holding food.

Above-the-neck
PROTECTION

Above-the-neck products protect our sight, hearing, breathing and brain – all vital to sustain life. These are some of the most critical PPE that meets a variety of very strict industry requirements.

STRUCK-BY HAZARDS

UNSAFE PARTICULATES

NOISE-INDUCED HEARING LOSS

IMPACT, SPLASH & DEBRIS

60 **HEAD PROTECTION** includes CSA Type 1 and Type 2 hard hats and safety helmets that by way of a protective shell and suspension system help attenuate impact force when struck by hard or falling objects. Bump caps help protect from scrapes and bumps that can be caused by walking or bumping into an object overhead in a confined space.

71 **HEARING PROTECTION** reduces the risk of cumulative and gradual hearing loss from work environments where noise levels typically exceed 85 decibels within an 8-hour time period. An environment that poses hearing hazards is one where individuals are consistently exposed to volume levels comparable to the noise produced by a lawn mower. PIP® ear plugs and muffs deliver a wide range of Noise Reduction Ratings (NRR), ranging from 20 to 33 dB.

83 **DISPOSABLE RESPIRATORS** are designed to meet stringent NIOSH requirements to help protect workers from airborne contaminants when working around particulate risks, filtering out between 95% to 99.97% of all particles that are 0.3 microns in diameter or larger.

91 **EYE PROTECTION** delivers maximum safety and enhanced productivity in hazardous environments by meeting the CSA Z94.3-20 standard for lens thickness, material, mounting and design and protection from impact, splash and debris. New lens technologies address common workplace hazards such as fogging, hindered vision and eye strain from glare and overexposure to blue light.

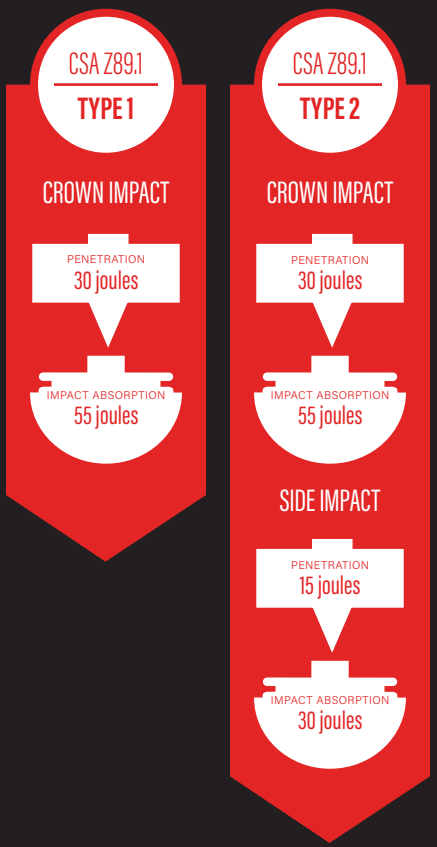

SECTION:

Head Protection

DYNAMIC PROVEN PROTECTION. PROVEN PERFORMANCE.™

Because there are so many different industries and applications where head protection is required, there are multiple categories and styles of head protection to consider. Evaluating the work environment and assessing the hazards is a crucial first step.

PIP® offers an extensive line of safety helmets and hard hats that protect workers from falling objects in multiple industries, from heavy-duty mining to residential construction, as well as bump caps for use in workspaces where hard hats are not mandated.

HEAD PROTECTION DISTINCTIONS

Hard hats and safety helmets are classified by ANSI standard Z89.1 and CSA standard Z94.1 as Type 1 for top of head protection or Type 2 for lateral impact protection. Both types are tested for impact attenuation and penetration resistance. Type 2 performance requirements include criteria for impact energy attenuation from force incurred at the front, back and sides of the head as well as for off-center penetration resistance and chin strap retention.

TYPE 1

Designed to protect workers from objects and blows that come from above, or from contact with fixed objects (exposed beams, pipes, etc.) that strike the top of the head to reduce the force of impact or penetration. Type 1 does not include a chin strap test or specification requirements.

TYPE 2

Protect both the top and the sides of the head by incorporating a foam liner, designed to absorb the force of impact with the head form swiveled at 60° in any direction so that the point of impact is off center.

		CROWN IMPACT		SIDE IMPACT	
STANDARD	**TYPE**	**PENETRATION**	**IMPACT ABSORPTION**	**PENETRATION**	**IMPACT ABSORPTION**
CSA Z89.1	**Type 1**	30 joules	55 joules	-	-
CSA Z89.1	**Type 2**	30 joules	55 joules	15 joules	30 joules

WORKING AT HEIGHT

TRIP AND FALL

STRUCK-BY HAZARDS

BUMPING INTO

ELECTRICAL CLASSES

Three classes indicate the helmet's electrical insulation rating.

CLASS E
ELECTRICAL

Non-vented, reduces the danger of contact with high voltage risks, proof tested at 20,000 volts.

CLASS G
GENERAL

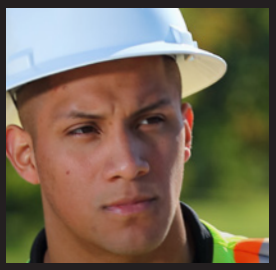

Non-vented, reduces the danger of low voltage risks, proof tested at 2,200 volts.

CLASS C
CONDUCTIVE

Vented, provides no electrical protection.

EXTREME PERFORMANCE
HEAT RESISTANCE

Certain shell materials are designed to protect for high heat, tested for several hours to maintain comfortable temperatures for workers in sustained high temperature environments.

HARD HAT

Most common form of head protection, with CSA Type 1 Class E (non-vented) as the most widely specified hard hat style. Features include a secure and adjustable suspension with a robust wheel ratchet to properly adjust fit.

SAFETY HELMET

Safety helmets are a relatively new concept in industrial and construction settings. Safety helmets feature an adjustable multi-point chin strap designed to keep the hard hat on the head in the event of a fall with a short brim design for unobstructed peripheral vision.

CSA Type 2 rated head protection offers the highest level of side-impact and penetration protection, designed with foam inserts that reduce the force of impact from a blow to the top, front, back and sides of the head. Transmitted force through the head form cannot exceed 4.45kN / 1000 lbf.

BUMP CAPS

Bump caps are designed to help protect against minor incidents such as bumping into or knocking against a stationary object. They are not CSA approved to protect against falling objects or projectiles. Environments with low ceilings or hanging obstructions that the worker might bump into or those where hard hats are not mandatory are ideal places to wear bump caps.

SECTION:

Hearing Protection

Noise-Induced Hearing Loss Can Be Prevented

This section contains important PPE related to hearing protection. As many as 11 million Canadians are exposed to potentially harmful noise at work. But, because hearing loss is gradual, many are unaware of the damage. For that reason, it's critical that hearing protection is used in industrial and construction settings.

All PIP® hearing protection carries a noise reduction rating (NRR) representing how much noise is reduced by the proper use of PPE. When choosing a device, it's important to select a product with an NRR that is appropriate for the environment in which it will be used. Comfort, ease of use and features are all key influencers when determining which hearing product is suitable.

COMPARING HEARING PROTECTION OPTIONS

Hearing protection comes in two formats. Ear Muffs help the wearer get maximum hearing protection because they seal against the head and cover the entire ear. Ear Plugs are more commonly used because they are considered more economical and the low profile means they can easily be worn with other PPE. However, the correct use of ear plugs is critical to their performance. PIP® recommends training and practice to ensure workers are using them properly.

PASSIVE EAR MUFFS
When choosing Passive Ear Muffs, consider the other PPE being worn. Neckband and cap mounted styles are designed to work with a hard hat, while headband style ear muffs, do not.

SINGLE-USE EAR PLUGS
Single-use Ear Plugs are the most popular choice – mostly for convenience and hygiene reasons. PIP® ear plugs with PowerSoft™ technology use a proprietary foam formulation for optimal rebound, a perfect fit and all-day comfort.

HYBRID EZ-TWIST™
The hybrid EZ-Twist™ technology eliminates the need for workers to roll down the ear plug before fitting; a unique stem makes great fit as easy as insert and twist.

MULTIPLE-USE EAR PLUGS
Multiple-use Ear Plugs are reusable and easy to clean, making them ideal for use in manufacturing, construction and MRO.

PIP® offers **Corded, Uncorded** and **Metal Detectable** options in both ear plug styles. Uncorded is economical, while corded plugs can be worn around the neck when not in use, making them easy to keep track of at all times. Metal detectable are preferred in food processing operations where X-rays may be used to confirm that nothing has contaminated the product.

PowerSoft™ Getting a proper fit

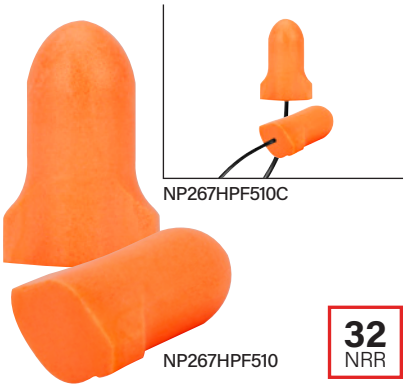

FOAM TECHNOLOGY

Foams with small, dense cells may result in:
› Harder plugs with shorter rebound time
› More pressure and discomfort in ear canal

Foams with large, airy cells may result in:
› Uneven roll-down and longer time to fit
› Longer rebound time

PIP® EAR PLUGS WITH POWERSOFT™ FOAM TECHNOLOGY DELIVER:
› **Optimal rebound**
› **Maximum all-day comfort**
› **Perfect fit**

SECTION:

Respiratory Protection

DYNAMIC PROVEN PROTECTION. PROVEN PERFORMANCE.™

This section of the catalog covers filtering facepiece respirators (FFR), commonly referred to as disposable respirators. These are designed to meet the National Institute for Occupational Safety and Health (NIOSH) requirements intended to help protect workers from airborne contaminants when working around particulate risks, filtering out between 95% to 99.97% of particles that are 0.3 microns in diameter or larger. PIP's line of Dynamic® filtering facepiece respirators are designed with advanced features for increased comfort and industrial wear and tear in mind, when working around the breathing hazards outlined below.

STANDARDS

The National Institute for Occupational Safety and Health (NIOSH) provides testing requirements for non-powered particulate filters that remove particulates from ambient air. NIOSH certifies three classes of filters with three levels of filter efficiency. PIP® carries the following classes of FFR for particulates:

N-SERIES
- **N95** – Operates with 95% efficiency

P-SERIES
- **P95** – Operates with 95% efficiency against oil-based particulates or aerosols
- **P100** – Operates with 99.97% efficiency against oil-based particulates or aerosols

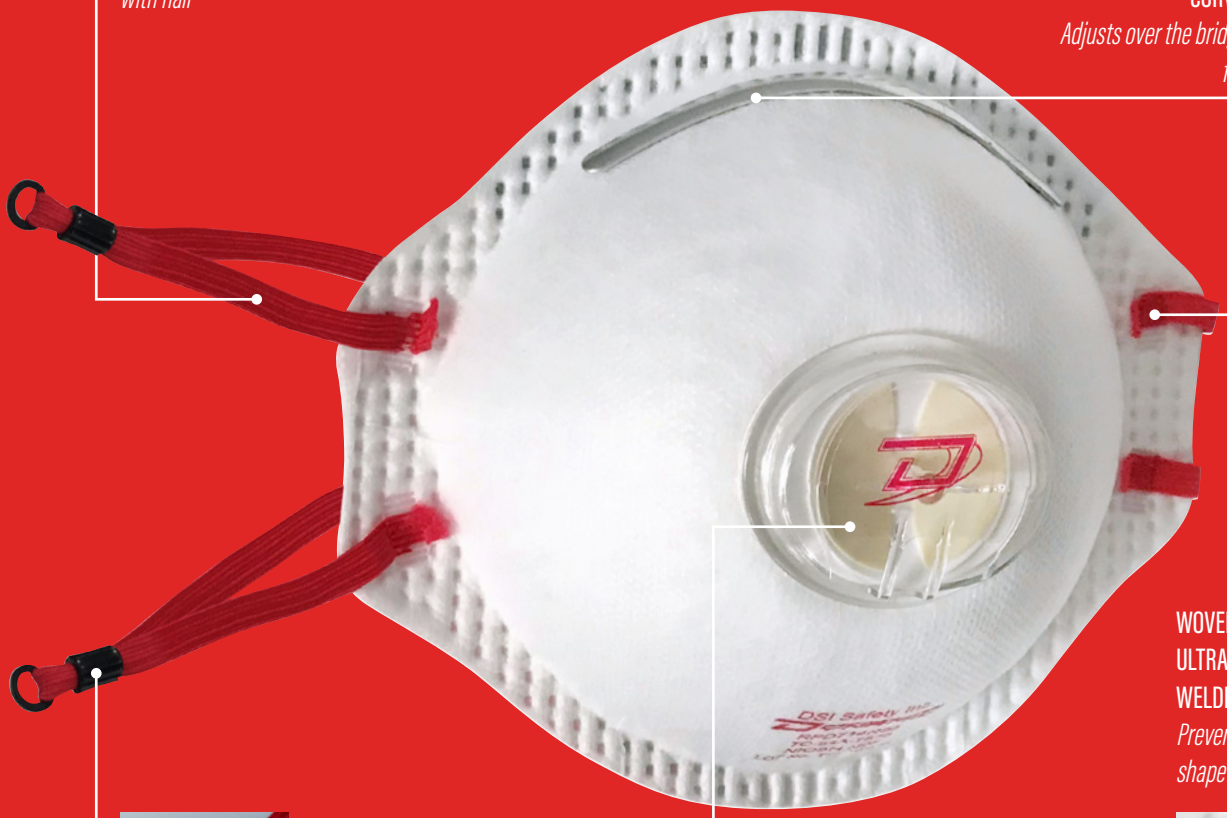

WELDING FUMES

OIL-BASED PARTICULATES

PARTICULATES

WOVEN ELASTIC STRAP
Prevents interference with hair

CURVED NOSE CLIP
Adjusts over the bridge of the nose for a custom fit

WOVEN STRAP ULTRASONICALLY WELDED TO WINGS
Prevents distorted shape while in use

SLIDING TOGGLE
Adjustable for secure custom respirator fit

CLEAR VALVE COVER WITH UNIQUE BUTTERFLY VALVE
Enables the user to ensure the valve is functioning properly

A BETTER DESIGNED RESPIRATOR

PIP® disposable respirators* are designed with advanced features for increased comfort and reliability when working around particulate risks.

RPD4000	Disposable Face Mask	50 / Box

SECTION:

Eye and Face Protection

CSA Z94.3-20 AND ANSI/ISEA Z87.1 CERTIFIED

These standards prescribe the design, performance specs and markings of eye and face safety products. Testing may include the following parameters:

IMPACT | DUST | CHEMICAL SPLASH | UV LIGHT AND BRIGHT GLARE | HEAT AND SPARKS | PARTICULATES

AVAILABLE LENS COATINGS

3A REVÊTEMENT COATING™

A permanently bonded coating that extends the life of the lens, without anti-fog protection.

- ANTI-SCRATCH: Extends lens life in abrasive environments.
- ANTI-UV: Absorbs more than 99.9% of harmful ultraviolet radiation.
- ANTI-STATIC: Reduces dust and particulate attraction.

4A REVÊTEMENT COATING™

A permanently bonded coating that extends the life of the lens.

- ANTI-FOG: Resists fogging and improves vision in humid environments.
- ANTI-SCRATCH: Extends lens life in abrasive environments.
- ANTI-UV: Absorbs more than 99.9% of harmful ultraviolet radiation.
- ANTI-STATIC: Reduces dust and particulate attraction.

Dyna Shield™

A premium anti-fog treatment that performs in even the harshest environments. The VPP technology prevents fogging of the lens even after repeated cleaning. This unique chemical coating also improves longevity with extra protection against abrasions.

- ANTI-FOG: Resists fogging and improves vision in humid environments.
- ANTI-SCRATCH: Extends lens life in abrasive environments.
- ANTI-UV: Absorbs more than 99.9% of harmful ultraviolet radiation.
- ANTI-STATIC: Reduces dust and particulate attraction.

PRODUCT STYLES

Full Frame – Popular styling for outdoor construction work

Semi-Frameless – Wraparound styling with improved peripheral vision

Frameless – Lightweight with unobstructed peripheral vision and fit

Foam Gasket – Sealed to keep out dust and airborne particles

Over-the-Glass – Designed to fit over prescription eyewear

Goggles – Protection from projectiles, impact and liquid splash

Lens Selection Chart

LIGHT TRANSMISSION: Is the amount of light reaching the eye after passing through a filter.

LIGHT ABSORPTION: Is the amount of light which is absorbed or eliminated by passing through a lens.

FILTERS: Are lenses that reduce or eliminate light intensity. The light spectrum covers ultraviolet, visible and infra-red radiation.

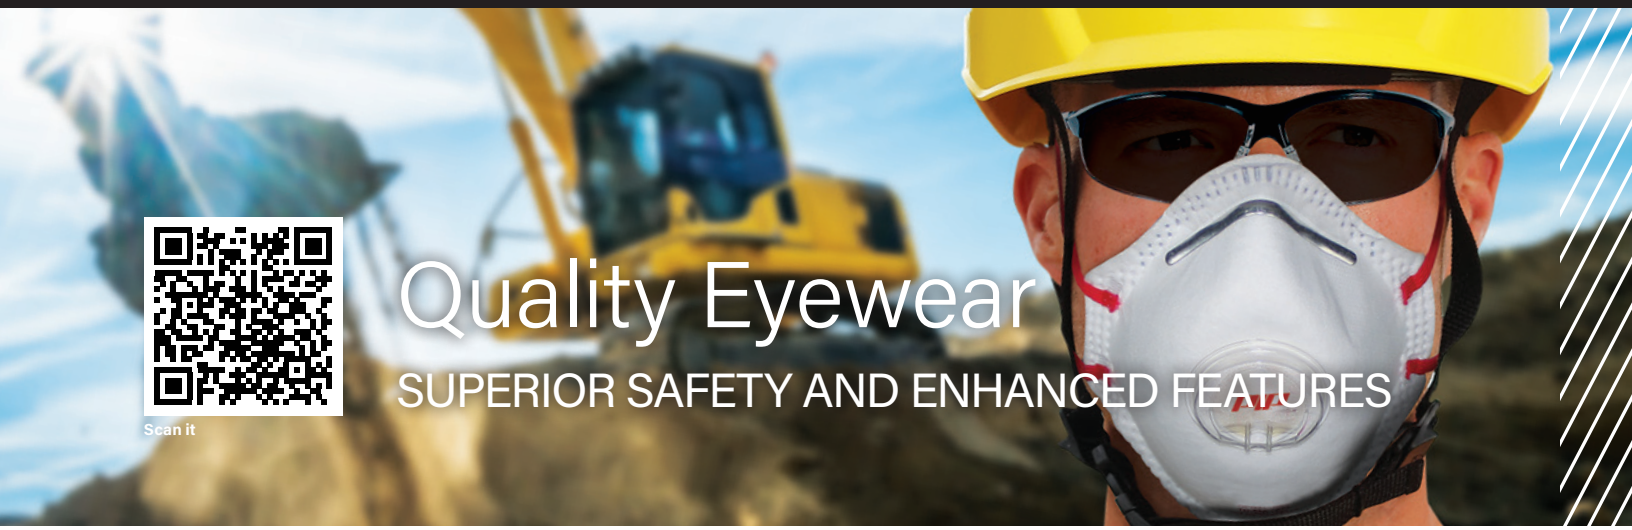

VISIBLE LIGHT: Is radiant energy that is visible to the human eye and having a wavelength between 380 nm to 760 nm.

INFRARED RADIATION: Is radiant energy or electromagnetic radiation of large wavelengths between 760 nm to 1000 nm.

ULTRAVIOLET RADIATION: Is radiant energy or electromagnetic radiation of short wavelengths between 100 nm to 380 nm.

Lens Color Chart

LENS COLOUR	DESCRIPTION	VISIBLE LIGHT TRANSMISSION %	UV LIGHT TRANSMISSION %
CLEAR	For indoor or outdoor applications where light filtration in not required.	90% ± 1%	0.005%
AMBER	For low light applications where contrast enhancement is required. Also reduces low energy blue light.	99% ± 0.05%	0.05%
BLUE	For work areas where high levels of yellow light is present, such as sodium vapor lighting.	47% ± 1%	0.05%
SMOKE	For outdoor applications where sunlight and glare cause eye strain and fatigue. Not for use when infrared protection is required.	11% ± 1%	0.05%
I/O MIRROR	For indoor/outdoor applications. Reduces glare from scattered light or low energy visible light.	54% ± 1%	0.05%
MIRROR	For outdoor applications. Reduces glare from scattered high energy visible light.	12% ± 1%	0.05%
POLARIZED SMOKE	For outdoor applications. Reduces extreme glare from excessive scattered high energy visible light.	12% ± 1%	0.05%
POLARIZED COPPER	When facing high energy sunlight producing high levels of glare while driving vehicles or mobile equipment. Also reduces blue light to increase contrast.	13% ± 1%	0.05%
POLARIZED BLUE MIRROR	For outdoor applications. Reduces extreme glare from highly reflective surfaces such as lakes, rivers, snow.	11% ± 1%	0.05%

MAXIMUM COMFORT AND PROTECTION

FEATURES & BENEFITS

- Wide one-piece OTG polycarbonate lens can be used over prescription eyewear
- Hidden indirect ventilation holes for protection against chemical splashes
- Soft TPR shroud in a nylon outer frame for maximum comfort
- Fabric strap made of FR material
- 4A coating: anti-scratch, anti-UV, anti-static and anti-fog
- Available shield attachment for added splash protection against dust and debris

CHEMICAL SPLASH & SOLVENT PROTECTION

FEATURES & BENEFITS

Chem Pro™

- Soft, lightweight PVC frame design
- Four cap vents provide indirect ventilation for protection against chemical splashes
- Neoprene strap for better resistance to solvents and chemicals
- 4A coating: anti-scratch, anti-UV, anti-static and anti-fog

Ultra Tek™

- Same as Chem Pro™ series, plus:
- Maximum panoramic and peripheral field of vision
- Large OTG frame designed to fit over prescription eyewear

PROTECT THE FACE FROM DEBRIS

High Performance Headgears

EPHG300

EPHG300R

EPHG400R

EPHG700R

TO USE WITHOUT PROTECTIVE CAPS

FEATURES & BENEFITS

- Accepts a wide range of faceshield styles
- Large sparkguard provides excellent protection
- Cross strap adjusts to allow an exceptional fit
- Full floating mount sparkguard provides comfortable wear even with heavy faceshield and continuous use
- Comes with pinlock or ratchet adjustment for quick, easy and perfect fit
- Noryl is a very tough material which is resistant to sparks and heat
- The EPHG300 and EPHG300R are not compatible with the EP919 faceshield series

Arc Flash Visors

EP919MGAF/60

EPAFK01

Electric arcs are produced by the electrical breakdown of a gas, producing a prolonged discharge, and can cause serious wounds. These arc flash windows provide protection against the glares of light from an arc flash.

FEATURES & BENEFITS

- 12 Cal/Cm^2
- Molded full coverage faceshield that offers a clear panoramic vision without any distortion
- Special formulation, providing a perfect definition of colors
- Made of PETG that is highly resistant to impacts and chemical splashes
- Meets CSA Z94.3-15 standards and ANSI Z87.1 requirements
- Meets ASTM F-2178-6 and NFPA 70E Standards

PART NO	SIZE	MATERIAL	COLOR	THICKNESS

Body PROTECTION

Environmental and workplace hazards determine the type and level of body protection needed to mitigate on-the-job risks. PIP® protective clothing is designed to help prevent injury caused by:

126 **HI-VIS APPAREL** reduces the risk associated with poor visibility and is categorized under CSA Z96:22, which specifies minimum amounts of retro-reflective materials, together with color and requirements for placement of materials, for HVSA used to enhance the visibility and safety of workers.

132 **COLD STRESS** hazards are not only caused by weather but also by refrigeration of cold storage facilities. In these environments, workers must wear proper protective equipment to regulate body temperature and to remain productive. Cold stress can inhibit the functions of vital organs such as the heart, leading to exhaustion, memory loss and fumbling hands, all of which increase the risk level of any job site. Through innovative design and technology, PIP® offers cold climate protection that keeps workers warm, safe and able to perform at their best.

133 **HEAT STRESS** is a hazard that millions of workers are exposed to. You can effectively manage heat stress and its associated risks with PPE technology that's designed to cool and evaporate moisture away from skin, as well as provide sun protection. Workers experiencing heat stress can present a range of responses, from cramps to dizziness and even death. Therefore, it is essential that workers stay hydrated and stay cool.

136 **FOOT PROTECTION** offers multiple levels of defense for a variety of work conditions, ranging from sprays and splashes during light-duty or recreational use, to increased coverage during inclement weather and heavy-duty impact with compression protection when the threat of injury is present.

SECTION:

Hi-Visibility Apparel

This section features high visibility clothing that is essential to not only protect workers in high traffic and situations with complex backgrounds, but also when the easy identification of emergency personnel is needed. That is why PIP® offers hi-vis apparel that meets the CSA Z96:22 standard from CSA compliant materials. Multiple fabrics, coverage options and features ensure that PIP's full-body PPE keeps workers both comfortable and protected from common hazards.

LOW VISIBILITY

HARSH WEATHER CONDITIONS

HIGH TRAFFIC SITUATIONS

COMPLEX BACKGROUNDS

UV EXPOSURE

CSA Z96:22 - HIGH-VISIBILITY SAFETY APPAREL

CSA Z96:22 is a standard that specifies the minimum requirements for apparel used for high-visibility purposes in the work environment. The clothing must be able to signal the presence of the user visually. It is also intended to provide conspicuity in hazardous situations specially in low-light conditions. The performance requirements of the garment include the color of the clothing, its retro-reflectivity, the minimum area it covers on the body, and its configuration.

CSA Z96:22 puts high-visibility safety apparel into three classes that are specified according to the body coverage that is provided.

CLASS 1
Is a basic harness with stripes of retroreflective material (or combination of retroreflective stripes with background material) coming over the shoulders forming two parallel lines in the front and a symmetric X shape in the back and encircling the waist (360º).

CLASS 2
Has a background material that covers the full upper torso (front, back, sides and over the shoulders). It must have retroreflective stripes coming over the shoulders forming two parallel lines in the front and a symmetric X shape in the back and encircling the waist (360º).

CLASS 3
Is a Class 2 apparel with the addition of retroreflective stripes encircling both arms and both legs (at/or below the knees).

In addition to specifying the performance for both background material and retroreflective stripes, **CSA Z96:22** confirms that:

> Background material must be made of bright or fluorescent colors (yellow/green, orange/red or only red).

> Retroreflective stripes must:
- Be 5 cm wide minimum
- Have a contrasting color to that of the background material
- Be placed at least 5 cm from the edge or from another stripe

CSA Z96:22 allows the addition of optional patches and lettering for identification or personalization purposes:

> If non-retroreflective patches or lettering are used, they must not cover more than 105 cm^2.
- A maximum of 25 cm^2 on the front of the garment
- Must not cover the retroreflective stripes on the back

> If retroreflective patches or lettering are used, they must not cover more than 500 cm^2.
- Additionally, they must not affect the recognizable pattern of the garment's retroreflective stripes

Revolutionary heating technology at the press of a button

- Utilizes innovative flexible heating panels built into the chest and back
- Three individual temperature settings - low, medium, and high range

Powerful 5-volt rechargeable power bank with an integrated USB plug in cord, provides up to 7 hours of heat on the low setting.

Includes a convenient remote control allowing the wearer to quickly adjust the temperature settings and continue working without removing clothing layers.

SECTION:

Heat Stress

From Discomfort to Danger in Minutes

This section contains important PPE related to heat stress. Workers experiencing heat stress can present a range of responses, from cramps to dizziness and even death. To avoid the danger, it is essential that workers stay hydrated and stay cool.

Risk of heat stress increases as the Heat Index increases. This measure reflects both heat and relative humidity, which impact our body's ability to regulate temperature since perspiration or sweat is less able to evaporate and cool us off. Small variations in our body temperature can affect our performance and health greatly. Just a two-degree rise in body temperature may affect mental acuity, and a five-degree increase can result in serious injuries related to heat stroke.

EVAPORATIVE COOLING TECHNOLOGY

Cooling products use **Evaporative Technology**, where water is absorbed by the product's cooling fibers, and cooling occurs as the moisture within the unit evaporates.

SUN PROTECTION COOLING TECHNOLOGY

Sun Protection is provided by hats and neck shades that use lightweight fabrics to shade the head and neck and help to keep the head ventilated and cool.

Cooling Towels

Long-lasting cooling and moisture wicking

FULL SAFETY STEEL TOE & MIDSOLE

PC383820

ENHANCED DURABILITY, PROTECTION AND COMFORT

16" PVC Full Safety Steel Toe and Midsole Boot

PC383820

- Flexible steel puncture resistant midsole reduces risks from sharp objects and meets ASTM F2413 PR
- Energy absorbing tread adds all-day comfort
- Less toe spring allows for more surface contact for improved channeling of water for better traction, slip resistance and comfort
- Tough outsole for good abrasion resistance
- Flexible upper material stays supple in cold temperatures to make walking easier
- Midsole is designed to utilize additional material in the standard area of the shank providing increased support and comfort
- Lower profile "kick off" ledge on back of boots for ease of removal
- Meets ASTM F2413-18 M/I/C Impact and Compression
- CSA certified

First Aid & Safety

When working in a high-risk environment, workers need to be able to react quickly to treat workplace injuries and potential emergencies. First aid focuses on providing care immediately to injured patients until professional medical help arrives, helping to prevent injuries from worsening, and to help relieve pain.

FIRST AID KITS

WOUND CARE

EYE WASH & EMERGENCY STATIONS

MEDICAL INSTRUMENTS & EQUIPMENT

BARRICADE TAPE AND TRAFFIC FLAGS

138 **FIRST AID KITS** are classified based on the assortment and quantity of first aid supplies intended to deal with most types of injuries that may be encountered in the workplace. These may include major and minor wounds, minor burns, sprains and strains and eye injuries. As each work environment is unique, it is expected that the contents of each kit will be supplemented as needed.

162 **WOUND CARE PRODUCTS**, such as adhesive bandages, have as their main objective to help prevent infection and other complications, in addition to helping accelerate the healing process while promoting a reduction in scarring.

177 **MEDICAL INSTRUMENTS** include a wide array of tools and equipment, from materials that aid in the application of first aid to emergency room supplies and EMS products.

180 **EYE WASH & EMERGENCY STATIONS** are designed for the cleansing of the eye from small impurities or to reduce injury severity while travelling to a plumbed eye wash station and/or a medical professional for assistance. The need for emergency eye wash stations is based on the types of chemicals being used and the tasks being done in the workplace.

186 **BARRICADE TAPES AND TRAFFIC FLAGS** serve as both a visible and physical barrier, which are intended to alert workers and limit access to a jobsite or a particular area. The two most common barricade tapes used on industrial jobsites are the yellow caution tape and the red danger tape.

Bandage Dispensers

FADISPR

FADISPB

Created specifically for the industrial market, these dispensers are easily installed and contain four different shapes of fabric bandages. Ideal in work areas where easy access to bandages is required, as they prevent loss of time from searching through a first aid kit. Colour coded red for standard type, and blue for metal detectable type.

FEATURES

- Dispenser and bandages are colour coded
- 4 different shapes of fabric bandages
- Prevents loss of time from searching through a kit
- Easy to install and to use

BANDAGE DISPENSERS

PART NO	DESCRIPTION
FADISPR	REGULAR ADHESIVE FABRIC STRIPS DISPENSER INCLUDES: 1 SET OF ADHESIVE FABRIC STRIPS (24 OF 3″ X ¾″ AND 16 OF 3″ X 1″) - 1 SET OF FABRIC ADHESIVE KNUCKLE STRIPS (16 OF 3″ X 1-½″) - 1 SET OF FABRIC ADHESIVE FINGER TIPS (16 OF 3″ X 1-¾″)
FADISPB	BLUE METAL DETECTABLE ADHESIVE FABRIC STRIPS DISPENSER INCLUDES: 1 SET OF BLUE METAL DETECTABLE FABRIC STRIPS (24 OF 3″ X ¾″ AND 16 OF 3″ X 1″) - 1 SET OF BLUE METAL DETECTABLE FABRIC KNUCKLE STRIPS (16 OF 3″ X 1-½″) - 1 SET OF BLUE METAL DETECTABLE FABRIC FINGER TIPS (16 OF 3″ X 1-¾″)

FADR036

RED DISPENSER REFILLS (STANDARD)

PART NO	DESCRIPTION
FADR016	BOX OF 6 SETS OF ADHESIVE FABRIC STRIPS (24 OF 3″ X ¾″) AND (16 OF 3″ X 1″)
FADR026	BOX OF 6 SETS OF ADHESIVE FABRIC FINGER TIPS (16 OF 3″ X 1-¾″)
FADR036	BOX OF 6 SETS OF ADHESIVE FABRIC KNUCKLE STRIPS (16 OF 3″ X 1-½″)

FADB046

BLUE DISPENSER REFILLS (METAL DETECTABLE)

PART NO	DESCRIPTION
FADB046	BOX OF 6 SETS OF BLUE METAL DETECTABLE FABRIC ADHESIVE STRIPS (24 OF 3″ X ¾″) AND (16 OF 3″ X 1″)
FADB056	BOX OF 6 SETS OF BLUE METAL DETECTABLE FABRIC ADHESIVE FINGER TIPS (16 OF 3″ X 1-¾″)

Gravity Fed Eye Wash Station

FAEWST16

▲ LOWER MANIFOLD TO ACTIVATE

Ideal for use in remote areas where a continuous supply of water is not available

FEATURES

- 16 gallon self-contained gravity flow station
- Delivers 3.533 L per min for 15 minutes
- Hi-vis green body easy to locate in an emergency
- Robust with reinforced ribbing to ensure durability
- Integrated flow nozzle is activated by lowering the yellow tray
- Waste water is directed through drain opening in basin
- Includes 3 ft drain hose to direct waste water
- Includes steel wall-mounting bracket
- Includes 8 oz bacteriostatic additive (FAEWC08) which protects against growth of bacteria, fungi, and algae
- Weight: 13 lbs empty, 146 lbs full
- Complies with ANSI Z358.1

Bio Med Wash®

FAEWBM03

FAEWBM07

BIO MED WASH® is a sterile, heavy mist containing 100% Bio-Logic Aqua®, an all-natural, pH neutral, pure tissue-culture grade of water. Ideal for removing particulate matter and crusted exudates from cuts and abrasions, and in removing irritating chemicals from skin and eyes.

FEATURES

- Emergency pH neutral eye wash
- Replaces distilled, saline, and tap water for most applications
- Washes dirt and other contaminants from cuts and lacerations
- Helps remove irritating chemicals from eyes and skin

ISOTONIC SOLUTIONS

FEATURES

- **Sterile (aseptic):** Bacteria are not introduced onto damaged eye tissue. Eliminates chlorine, contaminants, and pathogens.
- **Buffered:** To correct the pH (relative acidity and alkalinity) of the eye to a safe range.
- **Isotonic:** To balance the osmotic pressure of eye fluids.
- **Saline:** Formulated to physiologically correct saline content, allowing rinsing without irritation.

PROFESSIONAL VEST STYLE HARNESS WITH ALL ALUMINUM HARDWARE. INTEGRATED PAD ON SHOULDERS & LEG STRAPS. 5 POINT ADJUSTMENT.

Designed for comfort by eliminating all unnecessary weight and bulkiness. The hardware is made of lightweight aluminum, for a weight savings of 25% and exceptional corrosion resistance. The Dynamic® back pad focuses on comfort by relieving pressure points at your shoulders and the back of the legs. The non-bulky pad also eliminates heat zones, weight and reduces the overall mass of the harness, making this one of the most comfortable harnesses you will wear. Trauma straps provide crucial additional time in a rescue situation. CSA certified. Meets and exceeds ANSI and OSHA regulations.

PROFESSIONAL VEST STYLE HARNESS WITH INTEGRATED CUSHION ON BACK, SHOULDERS & LEG STRAPS AND 5 POINT ADJUSTMENT.

Designed with ease of donning top of mind, this harness also features lightweight breathable padding only where required. The lack of excessive padding results in the elimination of unnecessary heat zones and an increase in the mobility of the wearer, for comfort that lasts all day long. The lightest harness in its category. It also has trauma straps to provide crucial additional time in a rescue situation. CSA certified. Meets and exceeds ANSI and OSHA regulations.

VEST STYLE HARNESS WITH INTEGRATED PADDING, PERMANENT ATTACHED BELT WITH LUMBAR SUPPORT AND OPTIONAL SADDLE OR WORKSEAT.

Designed for the tower industry where comfort, fit and weight are critical. The integrated breathable padding is optimally sized to reduce unnecessary heat zones, while the all-aluminum hardware keeps weight minimal. Optional removable saddle or workseat provides additional comfort when working at heights for longer periods of time. Two frontal D-rings provide versatility when connecting to ladder systems or rescue/rope access devices. The comfortable integrated belt is specifically designed to ensure proper load transfer from the belt to the harness to maximize the load distribution to the body. Trauma straps provide crucial additional time in a rescue situation. CSA certified. Meets and exceeds ANSI and OSHA regulations.

EASY TO DON LIGHTWEIGHT HARNESS WITH INTEGRATED PADDING. 4 POINTS OF ADJUSTMENT.

Ideal for female workers where the traditional H-Style harness does not fit properly around the user's chest, this design provides a larger range of mobility. It is also optimal for ladder climbing as there is less slack with the front D-Ring vs H-Style harnesses. Trauma straps provide crucial additional time in a rescue situation. CSA certified. Meets and exceeds ANSI and OSHA regulations.

HI-VISIBILITY VEST STYLE HARNESS WITH 5 POINT ADJUSTMENT AND INTEGRATED BREAKAWAY TOOL BELT.

Manufactured of reinforced material designed to support the additional weight of heavy-duty tools. A 0.5" wide reflective stripe provides high visibility in low light conditions, and the tool belt breaks away in the event of a fall, eliminating the risk of injury to the abdomen. The hardware is made of lightweight aluminum, for a weight savings of 25% and exceptional corrosion resistance. The integrated shoulder pad and leather lumbar support are optimally sized to reduce heat zones while increasing comfort. Trauma straps provide crucial additional time in a rescue situation. CSA certified. Meets and exceeds ANSI and OSHA regulations.

Tower Lanyards

CERTIFIED

FP734AAR

FP737ACCR

Specifically designed for the tower industry due to its aluminum snap hooks which keep it lightweight. There is an O-ring to be used for tieback around the structure and can be used for rescue situations. The lanyard leg is adjustable to accommodate different size anchor structures.

Coated Lanyards

CERTIFIED

FPC74311

FPC746144

Ideal for dirty, contaminated or clean environments. The TPU coating provides resistance to abrasions, weld splatter, chemicals, paint, grease, and dirt. The lanyard leg can be wiped clean, making it easier to inspect and reducing the frequency of replacement. CSA certified. Meets and exceeds ANSI and OSHA regulations. This lanyard is specifically designed for fall arrest purposes for workers weighing between 45 kg (100 lb) to 140 kg (310 lb).

Stretch Lanyards

CERTIFIED

FP7S311

This lanyard's leg stretches from a length of 4.5 ft to 6 ft which allows the lanyard to stay out of the way when not in use, while providing the freedom to move away from your anchor point when required. This lanyard is specifically designed for fall arrest purposes for workers weighing between 45 kg (100 lb) to 140 kg (310 lb).

Tie-Back Lanyards

CERTIFIED

FP7331T

FP7371TT

Tie-back lanyards provide the ability to wrap the lanyard leg around a structure and connect back to itself. An auto-lock snap hook with 5,000 lb gate strength ensures there are no accidental disconnections. Eliminates the need for an additional anchorage connector. Specifically designed for fall arrest purposes for workers weighing between 45 kg (100 lb) to 140 kg (310 lb).

All our vertical lifelines are shrink wrapped at both spliced termination ends.

Rope Grabs

CERTIFIED

FP13130

FP15130

Rope grab kits offer a practical solution for many fall arrest applications. Rope grabs are equipped with a Panic Lock feature as well as an orientation lock-out feature that will not allow the rope grab to be installed upside down. All our rope grab combinations Meet and exceed ANSI and OSHA and are CSA certified only when used with Dynamic® Vertical Lifelines. This lanyard is specifically designed for fall arrest purposes for workers weighing between 45 kg (100 lb) to 140 kg (310 lb).

Rope grabs travel on a lifeline, automatically engaging the lifeline in the event of a fall.

FPDAVIT48 WITH BASE FPDAVITFLRBS

FPDAVITLADBS

FPDAVITLAD

Our Davit Systems consist of a base anchored to the structure, with a high-strength aluminum mast and boom. They allow the worker to be safely hoisted up and down, while suspended from a pivotable arm.

Ladder mounted davits are ideal for workers who need increased mobility while climbing a fixed ladder.

SECTION:

Tool Tethering

This section contains the essential items required for dropped objects prevention – durable tool tethering lanyards, tool connectors and functional tool tethering accessories specifically designed to meet the ANSI / ISEA 121-2018 Dropped Objects Standard.

Falling objects gain speed as they drop, resulting in a higher force at impact. Factor in the drop height and weight of the object and you will realize that something as small as a tape measure can cause serious injury or damage to equipment.

IT'S A LAW OF PHYSICS

Recordable incident resulting in an injury that requires first aid

Lost time incident (LTI), nonfatal traumatic injury that causes loss of time from work beyond the day or shift it occurred

Death resulting from an injury or trauma

ANSI / ISEA 121:2018

ANSI / ISEA 121:2018 establishes minimum design, performance, testing and labeling requirements for safety equipment designed to reduce dropped objects incidents.

Dropped objects include hand tools, measuring instruments, small parts, structural components and other items that need to be transferred and used at heights. This standard focuses on preventative solutions actively used by workers to mitigate these hazards.

PIP® Tool Lanyards are designed to securely attach to tools to help prevent dangerous drops while providing the user with the freedom of mobility and unimpeded functionality of the tool.

PIP® Tool Connector Attachment Points and Accessories are designed to be installed onto tools or equipment to provide appropriate connection points for tethering.

Lanyards with Barrel-Lock Carabiner

Maximum Load Limit 10 lb 4.5 kg

FP533100011
- Snag-resistant D-frame barrel-lock carabiner with angled gate
- Lock-pin on carabiner for extra security
- Shock cording inside nylon protective webbing

Maximum Load Limit 22 lb 9.9 kg

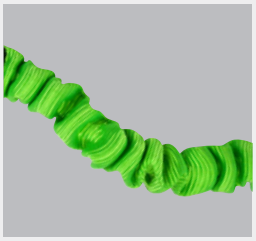

FP533100701
- Heavy-duty barrel-lock carabiner
- Strong nylon fastener end
- Swivel head for ease of use with large heavy tools

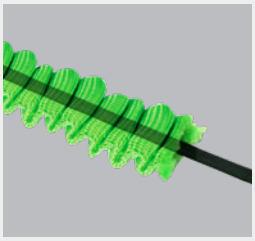

Maximum Load Limit 10 lb 4.5 kg

FP533100012
- Snag-resistant D-frame barrel-lock carabiner with angled gate
- Lock-pin on carabiner for extra security
- Dual loop with shock cording inside nylon protective webbing

THE PIP® DIFFERENCE

Hi-vis protective cover helps keep tether in view and provides heavy-duty protection against dirt, oil and abrasion.

Reinforced shock cord is extra tough, providing superior protection and durability.

Designed for tools with **captive holes** or to be used in conjunction with tool tape for smaller tools.

Powder-coated quarter turn **barrel-lock carabiner** with 1" gate opening ensures a secure connection.

STYLE NUMBER	MAXIMUM LOAD LIMIT	LEG	CARABINER	GATE OPENING	FASTENER

Chemical and Liquid PROTECTION

WHAT IS THE ALPHA CODING LISTING BELOW THE PICTOGRAM?

EN 374-3 coding: In order for a glove to receive the pictogram as shown, the glove must achieve a breakthrough time greater than (>) 30 minutes for at least 3 chemicals from the 12 listed below.

CODE LETTER	CHEMICAL	GAS NUMBER	CATEGORY
A	Methanol	67-56-1	Primary alcohol
B	Acetone	67-64-1	Ketone
C	Acetonitrile	75-05-8	Nitrile compound
D	Dichloromethane	75-09-2	Chlorinated paraffin
E	Carbon disulfide	75-15-0	Sulfur-containing organic compound
F	Toluene	108-88-3	Aromatic hydrocarbon
G	Diethylamine	109-89-7	Amine
H	Tetrahydrofuran	109-99-9	Heterocyclic and ethereal compound
I	Ethyl acetate	141-78-6	Ester
J	n-Heptane	142-85-5	Saturated hydrocarbon
K	Sodium hydroxide 40%	1310-73-2	Inorganic base
L	Sulfuric acid 96%	7664-93-9	Inorganic mineral acid

BREAKTHROUGH TIME (BTT)
The number of minutes from initial contact with a test chemical until it is first detected on the inside of the glove.

BREAKTHROUGH TIME PROTECTION INDEX
Each chemical tested is classified in terms of breakthrough time (performance level 0 to 6).

PROTECTION INDEX	
> 10 Minutes	Class 1
> 30 Minutes	Class 2
> 60 Minutes	Class 3
> 120 Minutes	Class 4
> 240 Minutes	Class 5
> 480 Minutes	Class 6

DISPOSABLE GLOVE GRADES

MEDICAL/EXAM GRADE
Medical/Exam grade disposable gloves go through rigorous factory-level testing to ensure the glove is high enough quality to provide effective barrier protection in higher-risk conditions. These gloves are commonly used in general clinics, emergency, first aid and on the frontline(s).

FOOD GRADE
Food grade disposable gloves are an effective barrier to prevent cross-contamination by preventing hands from coming into direct contact with food, proteins and oils. Often used as a liquid barrier under or over cut-resistant gloves to prevent contamination and wetness.

INDUSTRIAL GRADE
Industrial grade disposable gloves are typically 4 to 5 mil in thickness on average. Often used as limited use barrier gloves when coming into contact with unavoidable greases, oils, paints and other contaminants.

Food
SAFETY

This section of the catalog contains PPE commonly used in food manufacturing, processing and handling applications where both worker safety and food safety are essential. Gloves and sleeves are used to help protect workers against cuts, heat or cold exposure, as well as liquid and chemical splash or immersion.

Items like bouffants, beard covers and single-use gloves are imperative in the important task of food safety, keeping the food product from being contaminated.

Other PPE products – including eye and hearing protection, boots, aprons and clothing – focus on worker safety, helping protect workers from dangerous noise and fluid splash or bone shards during the manufacturing process.

Gloves and Sleeves

Gloves and sleeves from PIP® provide a wide range of protective properties; from disposable gloves that help prevent product contamination while keeping hands clean and dry, to unsupported and supported polymer gloves that provide chemical, liquid and thermal protection, to seamless knit gloves that provide high-level cut protection. PIP® tests products to be compliant with U.S. and European standards to ensure worker confidence and safety.

- ANSI/ISEA 105-2016 is the U.S. standard for specific performance properties related to mechanical protection, including cut, puncture and abrasion resistance.
- EN ISO 374-1:2016 addresses terminology and performance requirements for chemical risks.

Food Safety Specifications

Food Safety Specifications – The Code of Federal Regulations Title 21 (21 CFR) contains rules established by the U.S. Food and Drug Administration (FDA) that are organized into more than 200 parts. Parts 174 and 177 relate to items used in food processing, manufacturing, preparation and handling.

Part 174 addresses specifications related to "items that come into contact with food as part of packaging, holding, or processing, but are not intended to be added directly to, become a component, or have a technical effect in or on the food" as Indirect Food Additives. Because gloves, in particular, come into contact with food during production, the materials used in making protective gloves and sleeves are included in this group. Part 177 addresses specifications related to materials or polymers. All the gloves and sleeves that PIP® recommends for food contact are synthetic and polymer-based.

Product noted within this catalog as 21 CFR compliant are deemed to be made from compliant materials.

CLAW COVER®

THE #1 TRUSTED BRAND FOR HIGH-RISK FOOD INDUSTRY WORKERS

Made in the USA, Claw Cover® is designed to provide high-level cut protection while complying with both U.S. and Canadian standards for food contact. Claw Cover® products are launderable and can be used for operations where direct, indirect and incidental contact with food may occur.

US MESH

EXTREME CUT PROTECTION FOR FOOD PROCESSING

US Mesh® is the only choice for serious users in Food Safety. This preferred line of steel mesh gloves, sleeves and clothing delivers maximum cut protection and significant protection against stabs and punctures for Food Processing operations.

PROTECT FOOD WORKERS
FROM EXTREME CUT HAZARDS

Butchering / Cleaning / Food Preparation / Knife Sharpening

21 CFR

GPUSM1105
- Original adjustable closure with sewn-on web strap and snap, side split for easy donning and doffing
- 4-ring joined to protect against knife stabs and punctures
- Ergonomically constructed for maximum wearer comfort and safety
- Compliant with FDA 21 CFR 177.2800 and approved for direct food contact

21 CFR

GPUSM1147
- Metal spring is self-adjusting to the right fit
- All metal design features a fully-enclosed spring at the wrist for a secure, comfortable fit
- 4-ring joined to protect against knife stabs and punctures
- Ergonomically constructed for maximum wearer comfort and safety
- Compliant with FDA 21 CFR 177.2800 and approved for direct food contact

21 CFR

GPUSM1180
- Steel prong for a fully adjustable, comfortable fit
- Premium 4-ring hook ups on all glove seams for the ultimate in strength and puncture resistance
- Compliant with FDA 21 CFR 177.2800 and approved for direct food contact

21 CFR

GPUSM1305
- Original adjustable closure with two replaceable web straps with snap closure
- Premium 4-ring hook ups on all glove seams for the ultimate in strength and puncture resistance
- Mid-length cuff for extended coverage of the wrist
- Compliant with FDA 21 CFR 177.2800 and approved for direct food contact

21 CFR

GPUSM1547
- Metal self-adjusting, spring for the right fit, fully enclosed in mesh to avoid pinches
- Max-length cuff with an all metal design features a fully-enclosed spring at the wrist and forearm for a secure, comfortable fit
- Stiffeners in cuff to keep it in place on arm
- Compliant with FDA 21 CFR 177.2800 and approved for direct food contact

21 CFR

GPUSM3105
- Wrist-to-shoulder sleeve includes an adjustable chest strap that provides a custom fit and keeps the sleeve in position for all-day wear
- Web cuff at the wrist includes adjustable snap closure
- Compliant with FDA 21 CFR 177.2800 and approved for direct food contact

FULL SAFETY STEEL TOE & MIDSOLE

Enhanced durability, protection and comfort

16" PVC Full Safety Steel Toe and Midsole Boot

PC383820

- Flexible steel puncture resistant midsole reduces risks from sharp objects and meets ASTM F2413 PR
- Energy absorbing tread adds all-day comfort
- Less toe spring allows for more surface contact for improved channeling of water for better traction, slip resistance and comfort
- Tough outsole for good abrasion resistance
- Flexible upper material stays supple in cold temperatures to make walking easier
- Midsole is designed to utilize additional material in the standard area of the shank providing increased support and comfort
- Lower profile "kick off" ledge on back of boots for ease of removal
- Meets ASTM F2413-18 M/I/C Impact and Compression
- CSA Certified
- Sizes 6-14

Welding
SAFETY

Find the right product for the job

Every day, welders face extreme environments complete with heat, sparks and slag. Choosing the right protection is essential to not only minimizing safety risks but maximizing worker productivity and the quality of the weld. When selecting hand protection, consider the application and environment to properly equip welders with gloves that are designed to meet the unique demands of welding.

Caiman® and Ironcat® welding gloves by PIP® are specifically designed for the various heat shielding, dexterity and protection demands of stick, MIG and TIG welding.

Stick

MAXIMUM HEAT PROTECTION AND DURABILITY

Gloves for stick welding are designed with thicker materials to withstand higher heat. The longer length provides better forearm coverage, while welts protect finger seams against sparks and abrasion. Various materials (split cowhide, elk), linings (cotton, foam insulation) and thumb designs (wing, straight, reinforced strap) are available to suit worker preferences.

MIG

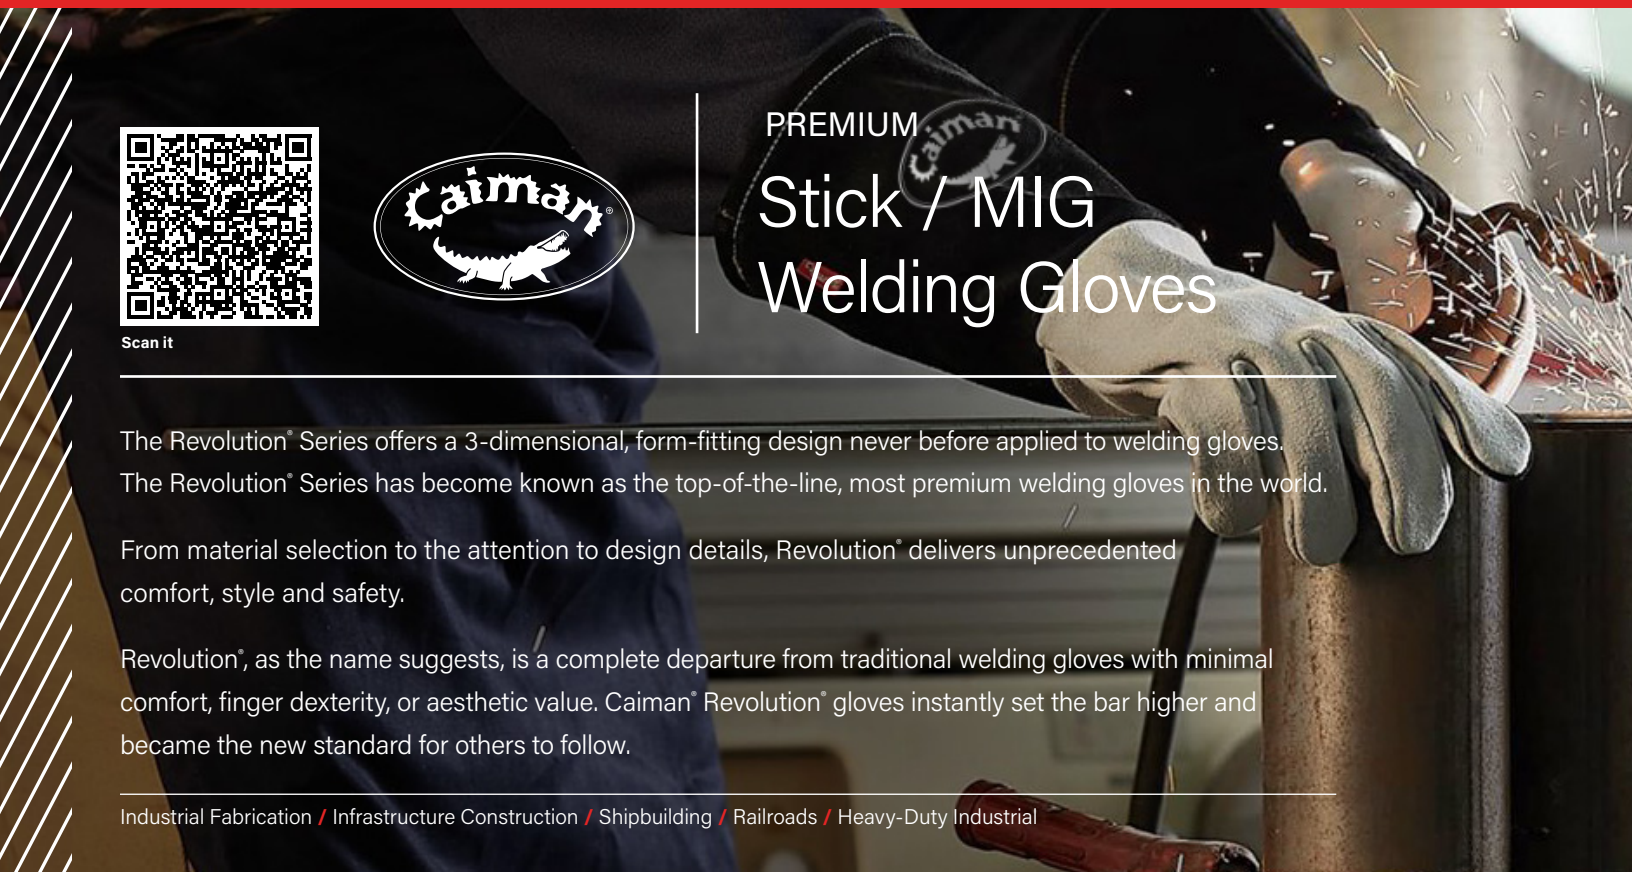

ENHANCED DEXTERITY AND COMFORT

MIG welding gloves allow for maximum dexterity with an unlined palm, while foam insulation on the back of the hand provides increased heat protection. Various lightweight materials are available including cowhide for durability, goatskin for increased dexterity, deerskin for unparalleled comfort and pigskin, which stays pliable even with increased wear and exposure to moisture. Wing thumb designs for open-handed work are available, as are straight thumb designs for better grip. A reinforced thumb strap increases durability in high-wear areas.

TIG

EXTREME PRECISION AND DURABILITY

Constructed of lightweight materials, unlined TIG welding gloves allow for maximum dexterity. Goatskin provides durability and comfort, while kidskin offers unmatched dexterity. For a softer feel and comfort, deerskin gloves are the best option. Wing thumb designs ideal for open-handed work are also available in a straight thumb design for optimal torch grip.

PREMIUM

Stick / MIG Welding Gloves

The Revolution® Series offers a 3-dimensional, form-fitting design never before applied to welding gloves. The Revolution® Series has become known as the top-of-the-line, most premium welding gloves in the world.

From material selection to the attention to design details, Revolution® delivers unprecedented comfort, style and safety.

Revolution®, as the name suggests, is a complete departure from traditional welding gloves with minimal comfort, finger dexterity, or aesthetic value. Caiman® Revolution® gloves instantly set the bar higher and became the new standard for others to follow.

BOARHIDE®

Leather Apparel

Protective clothing is made of premium quality split pigskin leather. Boarhide® is 15 to 25% lighter, stays cleaner, more breathable and offers better cut, abrasion and heat resistance values than split cowhide leather of equal thickness. Also, unlike split cowhide leather, Boarhide® is naturally elastic which provides enhanced mobility.

Bib Aprons

Controlled Environment

SAFETY

Controlled Environment refers to a work area that requires specific parameters for environmental conditions, handling, manufacturing, or testing. Typically, this covers room pressure, temperature, segregation and contamination control. Many laboratories are considered a Controlled Environment. A cleanroom is a type of Controlled Environment that requires more stringent environmental controls. This includes special equipment, processes and isolation as well as environmental air filtration meeting a higher ISO level that relates to the maximum acceptable numbers of particles (by size) in the air per cubic meter.

PIP® offers an extensive line of apparel, gloves and accessories for Controlled Environments that are designed to protect both the worker and the product by meeting multiple standards related to electrostatic discharge, contact, liquid resistance and extreme temperature handling.

Cleanroom Standards

The standards of cleanroom cleanliness are dictated by the size and quantity of particles that are present per volume of air. PIP's cleanroom PPE performs as an effective particle barrier to ensure particle emissions comply with cleanroom class specifications.

- **ISO 14644** – This standard categorizes the different sizes and amounts of airborne particles that are allowed per cubic foot within a cleanroom environment.

CLASS	FED STD 209E EQUIVALENT	0.1 MICRON	0.2 MICRON	0.3 MICRON	0.5 MICRON	1 MICRON	5 MICRON
ISO 1		10	2				
ISO 2		100	24	10	4		
ISO 3	1	1,000	237	102	35	8	
ISO 4	10	10,000	2,370	1,020	352	83	
ISO 5	100	100,000	23,700	10,200	3,520	832	29
ISO 6	1,000	1,000,000	237,000	102,000	35,200	8,320	293
ISO 7	10,000				352,000	83,200	2,930
ISO 8	100,000				3,520,000	832,000	29,300
ISO 9						8,320,000	293,000

- **IEST RP-CC005** – Test procedures for gloves and finger cots used in cleanrooms that evaluate cleanliness, barrier integrity, heat resistance, static charge, chemical compatibility and more.

Chemical Standards

PPE that acts as an effective barrier during chemical work is essential. PIP® offers specific lines of hand protection and disposable apparel that complies with the following standards:

- **ENG 374:2003** – Evaluates the efficacy of chemical resistant gloves under continuous contact.
- **ASTM F739 / F903** – Evaluates barrier effectiveness of PPE materials, seams and closures against liquid penetration via continuous contact.

ESD Standards

ESD safe PPE is composed of materials designed for protection against and the prevention of electrostatic discharge and is an essential part of the ESD workstation. Components work together to reduce discharge or act as a path to the ground where static electricity can be diverted. These materials are categorized by their conductive range, which include:

- **Static Dissipative** – Materials that allow a slow, controlled flow of electric charges to the ground, preventing discharge to and from human contact.
- **Anti-static** – Materials that have the ability to suppress charge generation or the prevention of static build up.

PIP® offers anti-static and static-dissipative gloves as well as an all-encompassing groundable static control garment system.
To successfully integrate into a professionally managed ESD program, PIP® has specific ESD Safe products that meet the following standards:

- **ANSI/ESD S20.20** – A standard providing tailored administrative and technical requirements for the development of a comprehensive ESD control program.
- **ANSI/ESD SP15.1** – A test procedure to measure both the intrinsic resistance and in-use electrical resistance of gloves or finger cots and personnel together as a system by using a constant area force electrode (CAFE).

PIP's ESD Safe products are an essential component of your facility's comprehensive and professionally managed ESD Program.

Microorganism Standards

To reduce the hazard of pathogen contamination, PPE materials are evaluated by resistance to liquid and viral penetration. PIP's products that protect against this contamination meet these strict guidelines:

- **ASTM 1670** – This method is used to evaluate a material's resistance to blood penetration via continuous liquid contact.
- **ASTM 1671** – Material resistance to the penetration of viral and bloodborne pathogens is tested by using a surrogate microbe under continuous liquid contact.

Additional Controlled Environment Standards

For Controlled Environment apparel and gloves:

- **NFPA 99** – A standard specifying that materials should have a resistivity of 1 x 10^11 Ω/sq at 50% relative humidity and a static decay time of less than 0.5 seconds when measured to the 10% (500 volt) cutoff level.
- **RoHS** - Restriction of Hazardous Substances - This European standard restricts the use of ten hazardous materials in the manufacture of various types of electronic and electrical equipment. All applicable products in the EU market since July 1, 2006 must pass RoHS compliance.

ESD PROPERTIES OF FINGER COTS

Anti-static materials have the ability to suppress charge generation or prevent static build up. Anti-static latex finger cots are treated with a proprietary surface treatment for enhanced ESD performance. Nitrile finger cots are naturally anti-static.

Static dissipative materials allow a slow, controlled flow of charge to the ground, preventing electric discharge. ESD latex finger cots incorporate a carbon pigment, making them inherently static dissipative.

Custom options

FOR ENHANCED PERFORMANCE

MADE IN THE USA

Customized Arm Protection

When it comes to arm protection, you don't have to settle for what's already out there. Identify your safety need, then customize your solution by choosing the material, size, and option(s) to maximize performance.

Call PIP® at (877) 446-3278
for part numbers and pricing for your order,
or if the custom option you need is not listed on this page.

Orders will ship within 2 weeks or up to 4 weeks for Pritex® sleeves.

CUSTOM OPTIONS

Several customizable options are available to help maximize protection by ensuring that the sleeve stays in place as consistently as possible. Thumb holes or thumb slots can help hold the sleeve up to the heel of your hand, while elastic bands or hook and loop closures help hold the sleeve up on your arm.

GENERAL PURPOSE

PROTECTIVE INDUSTRIAL PRODUCTS

Custom imprinting

FAST. DEPENDABLE. QUALITY PRINTING.

Custom imprinting is available on most hard hats, safety eyewear, gloves, vests, t-shirts, harnesses, and first aid kits.

WE USE THE MOST ADVANCED TECHNIQUE AND QUALITY INK THAT ENSURES YOUR LOGO POPS AND WILL NOT WEAR OFF. IT'S NOT JUST OUR IMAGE – IT'S YOURS TOO.

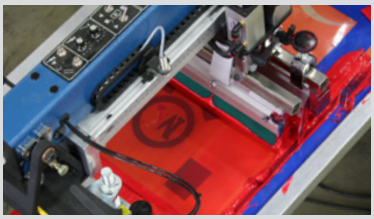

EXPERIENCE

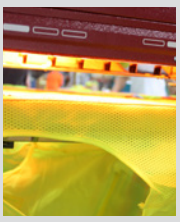

THE DIFFERENCE

FAST, EASY AND PRECISE. If you don't associate these words with your custom order requests, you're not taking advantage of PIP's logo and imprinting services. With exceptionally quick turnaround times and high-quality results, PIP® delivers the value-added service you and your customers expect. Put us to the test on your next logo print order and experience the difference.

INDUSTRY-LEADING TURNAROUND TIME

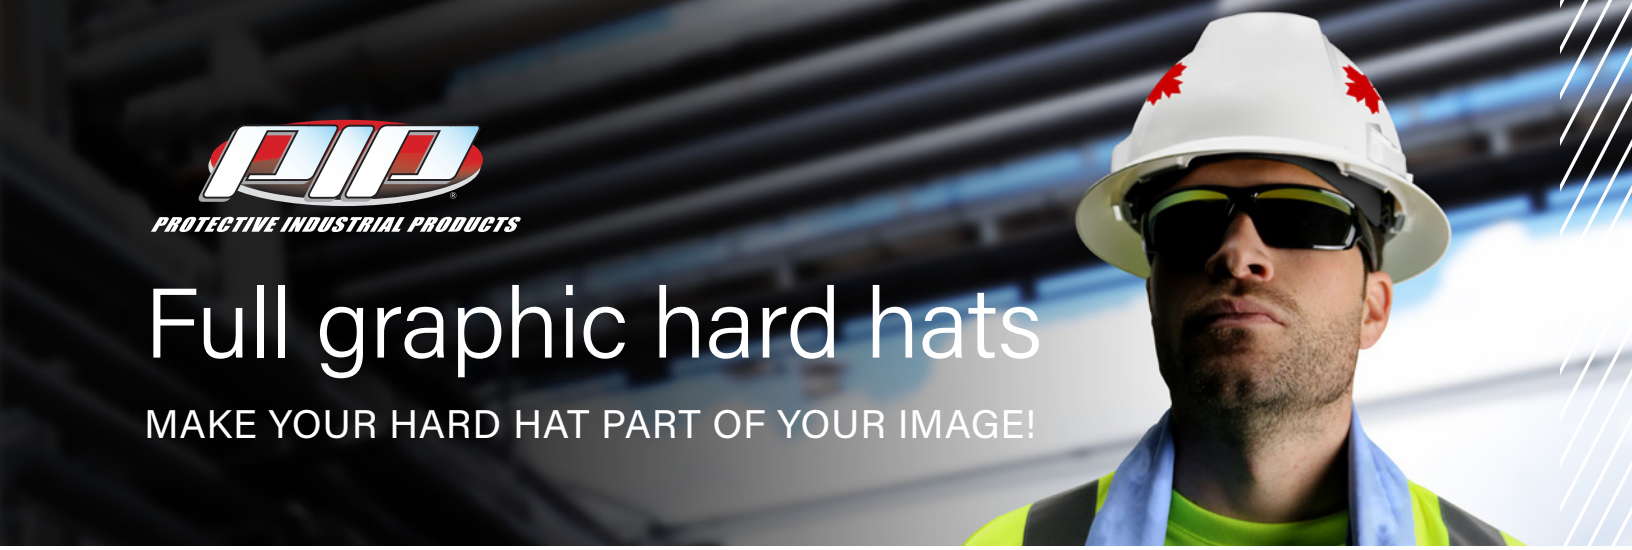

STATE-OF-THE-ART FACTORY

- Quick turnaround
- Low minimums
- Ordering software backed by a specialized core team

MORE THAN 40% OF COMMON PPE IS BRANDED

- Builds brand presence
- Promotes security on job sites
- Reduces equipment misplacement and loss

Programs that work for you

SIMPLE SAFETY SOLUTIONS

3SP™

3SP™ is a multifaceted, learning-based program designed and tailored to meet the needs of our customers.

Assessment

ON-SITE ASSESSMENT SURVEY

Working collaboratively with our distributor-partners, we perform all 3SP™ site surveys. This assures industrial customers that they are done effectively and without any downtime. 3SP™ trained representatives have a broad understanding of complex manufacturing environments and processes. Chances are they've met many similar challenges before with proven solutions.

Training

TRAINING SEMINARS

PIP's 3SP™ team consists of Product Specialists, Product Managers and PIP Sales Partners, who most often are providers of finished and raw material products. Qualified and ready to train at your facility, or at our headquarters in Laval, QC or our facility in Mississauga, ON where you can experience our customer training center, complete with hands-on activities.

Tools

TOOLS TO MAKE THE JOB SAFER

Today's work environment is dynamic. An aging workforce, transient and diverse workers, as well as an increased reliance on automation create challenges related to communication, distraction, stress and fatigue – all operating at a higher intensity. Training and orientation is short and we rely on quick and comprehensive tools for answers.

PROTECTIVE INDUSTRIAL PRODUCTS
When it gets challenging,
a trusted partner makes
the difference.

LIMITED WARRANTY

PIP Canada Ltd. (PIP®) warrants only that PIP® products will be free from defects in materials and workmanship at the time of sale. Upon receipt of each shipment, the customer must examine the products for defect or shortage and notify PIP® in writing within thirty (30) days after such receipt of any claims reasonably discernible. All claims not reasonably discernible within thirty (30) days must be made in writing within one (1) year after receipt of shipment. Any claim not timely made shall be waived. This limited warranty is exclusive and in lieu of all other warranties, express, implied or statutory. PIP's entire obligation and the exclusive remedy to any party for breach of this limited warranty shall be limited to replacement of the defective product or refund of the original purchase price of the product, at PIP's option. PIP's limited warranty shall not apply to PIP® products that have been subject to misuse, accident, negligence, handling, storage, or use.

DISCLAIMER OF IMPLIED WARRANTIES

All implied warranties which may arise by implication of law or application, course of dealing, usage of trade, including, but not limited to, implied warranties of merchantability, fitness for a particular purpose, title, and non-infringement are expressly excluded. The user is solely responsible for the suitability of the product selected for a particular application.

GUARANTEED TRIAL-ORDER PROGRAM

Trial orders are available to customers of PIP® on a satisfaction or no-pay basis. The program lets end-users evaluate PIP® gloves, in their actual application and on-site condition, on a satisfaction-or-they-don't-pay basis to make sure they're the right gloves for the job. For more information about our Guaranteed Trial Order Program, please contact your PIP® Sales Representative.
