

# WOMEN'S PPE SAFETY PRODUCTS

[www.pipcanada.ca](http://www.pipcanada.ca)

Women are important contributors on job sites and factory floors all across Canada. It is essential that they have access to PPE that is designed specifically to fit and protect them properly, providing them with peace of mind as they work. Oversized PPE in traditionally male-dominated industries can get in the way, reducing productivity and potentially leading to injury.

This guide outlines products selected to fit women, and that provide optimal comfort and certified protection on the job.

# When it comes to keeping women safe on the job, fit matters.

**7**  
MILLION

Approximately 7 million women are currently employed in the Canadian labor workforce

Approximately 1 out of 10 construction workers are female

Women make up nearly 1/3 of the manufacturing industry workforce in Canada

Proposed amendments to the Construction Projects Regulation in Ontario, if approved, would require that PPE (including protective clothing) be properly fitted to women. Said amendments would come into effect on July 1, 2023.

# Workwear Designed for Women

## Bisley

Bisley® is a leader in providing women's options that have been researched and designed to be comfortable, flattering for the female body shape, and most importantly to provide optimal protection on the job site.

### THE WOMEN'S WORKWEAR DIFFERENCE

**Silhouette:** Women's shirts are cut and sewn to properly accommodate curves, whereas men's are cut straight. Darts are also sewn to the chest.

**Sleeves:** The location of the arm cut of a women's work shirt is sewn slightly tighter and the sleeve is generally shorter.

**Hips:** Clothing is cut, shaped and sewn to fit the hip width of the wearer. Men's designs are usually cut straight.

**Chest:** Women's shirts are sewn with additional space in the chest region to accommodate different bust sizes.

## Miss-Dyna™ X-Trend™ Aluminum

FPVW04DG

### Easy to Don Lightweight Harness with Integrated Padding and 4 Points of Adjustment

Ideal for female workers where the traditional H-Style harness does not fit properly around the user's chest, this design provides a larger range of mobility. It is also optimal for ladder climbing as there is less slack with the front D-Ring vs H-Style harnesses. Trauma straps provide crucial additional time in a rescue situation. CSA certified. Meets and exceeds ANSI and OSHA regulations.
